Rao, 2022-09-01 Video is the main driver of bandwidth use accounting for over 80 per cent of consumer Internet traffic Video compression is a critical component of many of the available multimedia applications it is necessary for

storage or transmission of digital video over today's band limited networks. The majority of this video is coded using international standards developed in collaboration with ITU-T Study Group and MPEG. The MPEG family of video coding standards began in the early 1990s with MPEG-1 developed for video and audio storage on CD-ROMs with support for progressive video. MPEG-2 was standardized in 1995 for applications of video on DVD standard and high definition television with support for interlaced and progressive video. MPEG-4 part 2 also known as MPEG-2 video was standardized in 1999 for applications of low bit rate multimedia on mobile platforms and the Internet with the support of object based or content based coding by modeling the scene as background and foreground. Since MPEG-1 the main video coding standards were based on the so called macroblocks. However research groups continued the work beyond the traditional video coding architectures and found that macroblocks could limit the performance of the compression when using high resolution video. Therefore in 2013 the high efficiency video coding HEVC also known as H.265 was released with a structure similar to H.264 AVC but using coding units with more flexible partitions than the traditional macroblocks. HEVC has greater flexibility in prediction modes and transform block sizes also it has a more sophisticated interpolation and deblocking filters. In 2006 the VC-1 was released. VC-1 is a video codec implemented by Microsoft and the Microsoft Windows Media Video 9 and standardized by the Society of Motion Picture and Television Engineers SMPTE. In 2017 the Joint Video Experts Team JVET released a call for proposals for a new video coding standard initially called Beyond the HEVC Future Video Coding FVC or known as Versatile Video Coding VVC. VVC is being built on top of HEVC for application on Standard Dynamic Range SDR High Dynamic Range HDR and 360 Video. The VVC is planned to be finalized by 2020. This book presents the new VVC and updates on the HEVC. The book discusses the advances in lossless coding and covers the topic of screen content coding. Technical topics discussed include Beyond the High Efficiency Video Coding High Efficiency Video Coding encoder Screen content Lossless and visually lossless coding algorithms Fast coding algorithms Visual quality assessment Other screen content coding algorithms Overview of JPEG Series

Human Perception of Visual Information Bogdan Ionescu, Wilma A. Bainbridge, Naila

Murray, 2022-01-01 Recent years have witnessed important advancements in our understanding of the psychological underpinnings of subjective properties of visual information such as aesthetics memorability or induced emotions Concurrently computational models of objective visual properties such as semantic labelling and geometric relationships have made significant breakthroughs using the latest achievements in machine learning and large scale data collection There

has also been limited but important work exploiting these breakthroughs to improve computational modelling of subjective visual properties The time is ripe to explore how advances in both of these fields of study can be mutually enriching and lead to further progress This book combines perspectives from psychology and machine learning to showcase a new unified understanding of how images and videos influence high level visual perception particularly interestingness affective values and emotions aesthetic values memorability novelty complexity visual composition and stylistic attributes and creativity These human based metrics are interesting for a very broad range of current applications ranging from content retrieval and search storytelling to targeted advertising education and learning and content filtering Work already exists in the literature that studies the psychological aspects of these notions or investigates potential correlations between two or more of these human concepts Attempts at building computational models capable of predicting such notions can also be found using state of the art machine learning techniques Nevertheless their performance proves that there is still room for improvement as the tasks are by nature highly challenging and multifaceted requiring thought on both the psychological implications of the human concepts as well as their translation to machines

Connected Media in the Future Internet Era Ahmet Kondoz, Tasos Dagiuklas, 2016-10-08 This book describes recent innovations in 3D media and technologies with coverage of 3D media capturing processing encoding and adaptation networking aspects for 3D Media and quality of user experience QoE The contributions are based on the results of the FP7 European Project ROMEO which focuses on new methods for the compression and delivery of 3D multi view video and spatial audio as well as the optimization of networking and compression jointly across the future Internet The delivery of 3D media to individual users remains a highly challenging problem due to

the large amount of data involved diverse network characteristics and user terminal requirements as well as the user's context such as their preferences and location. As the number of visual views increases, current systems will struggle to meet the demanding requirements in terms of delivery of consistent video quality to fixed and mobile users. ROMEO will present hybrid networking solutions that combine the DVB-T2 and DVB-NGH broadcast access network technologies together with a QoE-aware Peer-to-Peer (P2P) distribution system that operates over wired and wireless links. Live streaming 3D media needs to be received by collaborating users at the same time or with imperceptible delay to enable them to watch together while exchanging comments as if they were all in the same location. This book is the last of a series of three annual volumes devoted to the latest results of the FP7 European Project ROMEO. The present volume provides state-of-the-art information on 3D multi-view video spatial audio networking protocols for 3D media P2P 3D media streaming and 3D Media delivery across heterogeneous wireless networks among other topics. Graduate students and professionals in electrical engineering and computer science with an interest in 3D Future Internet Media will find this volume to be essential reading.
