Geospatial Visualisation Antoni Moore, Igor Drecki, 2012-10-01 This book is a selection of chapters evolved from papers on completed research submitted to GeoCart 2010 the 1st ICA Regional Symposium on Cartography for Australasia and Oceania held in Auckland New Zealand 1st-3rd September 2010. All of the chapters have been updated and revised thoroughly. They have been blind peer reviewed by two referees of international research standing in geospatial science mostly in the subdisciplines of cartography and geovisualisation. The book features cutting edge topics such as geovisual analytics, mobile Web 2.0 mapping, spatiotemporal representation, cognitive cartography, historical mapping and 3D technology. **XPath and XPointer** John Simpson, 2002-07-31 Referring to specific information inside an XML document is a little like finding a needle in a haystack: how do you differentiate the information you need from everything else? XPath and XPointer are two closely related languages that play a key role in XML processing by allowing developers to find these needles and manipulate embedded information. XPath describes a route for finding specific items by defining a path through the hierarchy of an XML document, abstracting only the information that is relevant for identifying the data. XPointer extends XPath to identify more complex parts of documents. The two technologies are critical for developers seeking needles in haystacks in various types of processing. XPath and XPointer fills an essential need for XML developers by focusing directly on a critical topic that has been covered only briefly. Written by John Simpson, an author with considerable XML experience, the book offers practical knowledge of the two languages that underpin XML. XSLT and XLink. XPath and XPointer cuts through basic theory and provides real world examples that you can use right away. Written for XML and XSLT developers and anyone else who needs to address information in XML documents, the book assumes a working knowledge of XML and XSLT. It begins with an introduction to XPath basics. You'll learn about location steps and paths, XPath functions and numeric operators. Once you've covered XPath in depth, you'll move on to XPointer: its background, syntax and forms of addressing. By the time you've finished

the book you'll know how to construct a full XPath one that uses an XPath location path to address document content and completely understand both the XPath and XPointer features it uses XPath and XPointer contains material on the forthcoming XPath 2.0 spec and EXSLT extensions as well as versions 1.0 of both XPath and XPointer A succinct but thorough hands on guide no other book on the market provides comprehensive information on these two key XML technologies in one place

The Architecture of Scientific Software Ronald F. Boisvert, Ping Tak Peter Tang, 2013-04-17 Scientific applications involve very large computations that strain the resources of whatever computers are available Such computations implement sophisticated mathematics require deep scientific knowledge depend on subtle interplay of different approximations and may be subject to instabilities and sensitivity to external input Software able to succeed in this domain invariably embeds significant domain knowledge that should be tapped for future use Unfortunately most existing scientific software is designed in an ad hoc way resulting in monolithic codes understood by only a few developers Software architecture refers to the way software is structured to promote objectives such as reusability maintainability extensibility and feasibility of independent implementation Such issues have become increasingly important in the scientific domain as software gets larger and more complex constructed by teams of people and evolved over decades In the context of scientific computation the challenge facing mathematical software

practitioners is to design develop and supply computational components which deliver these objectives when embedded in end user application codes The Architecture of Scientific Software addresses emerging methodologies and tools for the rational design of scientific software including component integration frameworks network based computing formal methods of abstraction application programmer interface design and the role of object oriented languages This book comprises the proceedings of the International Federation for Information Processing IFIP Conference on the Architecture of Scientific Software which was held in Ottawa Canada in October 2000 It will prove invaluable reading for developers of scientific software as well as for researchers in computational sciences and engineering
