### Chapter 16 – Excretory Products and their Elimination

#### 1. Define Glomerular Filtration Rate (GFR)

Ans: The amount of glomerular filtrate which is formed by the kidneys in a minute is known as glomerular filtration rate, which is about 125ml per minute.

It is used to check the amount of blood passing through the glomeruli.

#### 2. Explain the Autoregulatory mechanism of GFR.

Ans: The regulation of GFR through the kidney is autoregulatory and it is regulated by the juxtaglomerular apparatus, which is a microscopic structure located between the renal corpuscles and distal convoluted tubules of the same nephron.

- GFR helps in the regulation of renal blood flow and glomerular filtration rate. Fall in GFR activates juxtaglomerular cells which releases renin.
- By the renin-angiotensin mechanism, the reabsorption of sodium and water takes place with increased blood pressure which brings GFR back to normal.

#### 3. Indicate whether the following statements are true or false:

A.Micturition is carried out by a reflex.

B.ADH helps in water elimination, making the urine hypotonic.

C.Protein-free fluid is filtered from blood plasma into the Bowman's capsule. Henle's loop plays an important role in concentrating the urine.

D.Glucose is actively reabsorbed in the proximal convoluted tubule.

Ans:

*Genetic Programming Theory and Practice II* Una-May O'Reilly, Tina Yu, Rick Riolo, Bill Worzel, 2006-03-16 The work described in this book was first presented at the Second Workshop on Genetic Programming Theory and Practice organized by the Center for the Study of Complex Systems at the University of Michigan Ann Arbor 13-15 May 2004. The goal of this workshop series is to promote the exchange of research results and ideas between those who focus on Genetic Programming (GP) theory and those who focus on the application of GP to various real world problems. In order to facilitate these interactions the number of talks and participants was small and the time for discussion was large. Further participants were asked to review each other's chapters before the workshop. Those reviewer comments as well as discussion at the workshop are reflected in the chapters presented in this book. Additional information about the workshop addendums to chapters and a site for continuing discussions by participants and by others can be found at <http://cscs.umich.edu/8000/GPTP/2004/>. We thank all the workshop participants for making the workshop an exciting and productive three days. In particular we thank all the authors without whose hard work and creative talents neither the workshop nor the book would be possible. We also thank our keynote speakers Lawrence Dave Davis of NuTech Solutions Inc, Jordan Pollack of Brandeis University and Richard Lenski of Michigan State University who delivered three thought provoking speeches that inspired a great deal of discussion among the participants.
