

# 1. INTRODUCTION

Researchers must read papers for several reasons: to review them for a conference or a class, to keep current in their field, or for a literature survey of a new field. A typical researcher will likely spend hundreds of hours every year reading papers.

Learning to efficiently read a paper is a critical but rarely taught skill. Beginning graduate students, therefore, must learn on their own using trial and error. Students waste much effort in the process and are frequently driven to frustration.

For many years I have used a simple approach to efficiently read papers. This paper describes the ‘three-pass’ approach and its use in doing a literature survey.

# 2. THE THREE-PASS APPROACH

The key idea is that you should read the paper in up to three passes, instead of starting at the beginning and plowing your way to the end. Each pass accomplishes specific goals and builds upon the previous pass: The *first* pass gives you a general idea about the paper. The *second* pass lets you grasp the paper’s content, but not its details. The *third* pass helps you understand the paper in depth.

## 2.1 The first pass

The first pass is a quick scan to get a bird’s-eye view of the paper. You can also decide whether you need to do any more passes. This pass should take about five to ten minutes and consists of the following steps:

West, Lindsay Turnbull, 2023-01-30 Writing scientific publications is a fundamental step in the research process Furthermore as science becomes more interdisciplinary and the number of journals continues to expand individual papers increasingly need to stand out to be read and have any form of impact It is widely assumed that students and early career scientists will simply acquire the necessary expertise However this could not be further from the truth many early career scientists find writing both intimidating and overwhelming writing is a skill that needs to be learnt and actively developed This novel book s fundamental principle is simple the reader must come first The purpose of a scientific paper is to pass on knowledge and so impactful writing must focus on attracting holding and illuminating readers The authors demonstrate how just a few simple pointers can significantly improve both writing quality and impact They tackle each component of a paper in turn providing a simple framework that makes clear what needs to be included and what doesn t and in what order They also provide advice for writing up different types of science from laboratory experiments to theoretical modelling The focus throughout is on the need to use simple jargon free English and to assume that the reader has little or no prior knowledge In summary the book is about writing better scientific papers that are more likely to be read and have impact *Scientific Papers Made Easy* is targeted at a broad audience of students and professionals across the biological life and human sciences It uses simple biological and human examples that assume no prior knowledge and will resonate with any scientist     *How to Write Better Medical*

data and ideas into a published paper Many researchers in medicine including the life sciences and health sciences struggle to get their research written and published Manuscripts are typically rejected and or sent back for revisions several times before ever being published One reason for this is that researchers have not received much instruction in the specific subjects and skills needed to write and publish scientific medical papers research methodology ethics statistics data visualization writing revising and the practicalities of publishing Instead of wasting the reader s time discussing trivialities of punctuation spelling etc this book tackles all the major scientific issues that routinely lead to manuscripts getting rejected from the journals The section Preparing covers the range of methodological ethical and practical aspects that researchers need to address before starting to write their paper The section Analyzing reviews commonplace problems in the statistical analysis and presentation and how to resolve those problems The section Drafting describes what to write in all the various parts of a paper the Introduction Methods Results Discussion Abstract etc The section Revising explains and illustrates how to improve the writing style of any manuscript The section Publishing discusses how to navigate the peer review process and all other practical aspects of the publishing phase This book draws on the author s decade of experience as an independent medical writer and research consultant but it is not written merely as the personal opinion of yet another expert The entire book is grounded in the existing scientific and scholarly literature with extensive references and a lengthy annotated bibliography so readers can quickly obtain more information on any aspect they want Thus this book provides a more evidence based scholarly account of how medical scientific papers should be written in order to improve medical communication and accelerate scientific progress After reading this entire book cover to cover medical researchers will know how to write better quality medical papers and they will be able to publish their work in better journals with less time and struggle This book is essential reading for anyone conducting research in clinical medicine life sciences or health sciences
