Risk-Based Project Decisions in Situations of High Complexity and Deep Uncertainty Yuri G. Raydugin, 2024-06-06 This book integrates for readers three areas of knowledge pertaining to risk-based project decision making: project risk management, PRM complexity theory and decision making under deep uncertainty, DMDU. Readers will appreciate that in practice too often relevant complexity and uncertainty factors are either ignored or overlooked, resulting in epic project failures. The author discusses a variety of methodologies and a decision tree type framework to determine why, when and how particular methodologies should be applied to ensure project success. These include nonlinear Monte Carlo techniques, a dynamic adaptive methodology to adapt to external environment changes, game theory for devising robust decision making criteria, systems dynamics and cost escalation modelling, as well as risk-based economic based alternatives selection methodologies. This book will be an eye opener for many PRM practitioners helping to increase their chances of project success by properly handling inescapable project complexity and deep uncertainty implications in specific contexts.
