Paleobiology of the Polycystine Radiolaria David Lazarus, Noritoshi Suzuki, Yoshiyuki Ishitani, Kozo Takahashi, 2020-12-30 Polycystine radiolaria are exclusively marine protists and are found in all ocean waters from polar regions to the tropics and at all water depths There are approximately 600 distinct described living species and several thousand fossil species of polycystines Radiolarians in general and polycystines in particular have recently been shown to be a major component of the living plankton and important to the oceanic carbon cycle As fossils radiolarians are also fairly common and often occur in sediments where other types of fossils are absent This has made them very valuable for certain

types of geologic research particularly estimating the geologic age of the sediments containing them and as guides to past oceanic water conditions As our current understanding of the biology and even taxonomy of the living fauna is still very incomplete evolutionary studies based on living polycystines are still rare However the common occurrence of numerous specimens for many species and in a wide variety of oceanic environments provides an excellent opportunity to study the processes of biologic evolution in the fossil record Paleobiology of the Polycystine Radiolaria is the first major book on radiolarians to appear in the western literature since 2001 Focusing on living and fossil siliceous shelled radiolarians it is notable for its emphasis not upon morphologic or taxonomic detail but on concepts and applications The book attempts to provide a balanced critical review of what is known of the biology ecology and fossil record of the group as well as their use in evolutionary biostratigraphic and paleoceanographic research Full chapters on the history of study and molecular biology are the first ever in book form Written for an audience of advanced undergraduate to doctoral students as well as for a broad range of professionals in the biological and Earth sciences Paleobiology of the Polycystine Radiolaria summarizes current understanding of the marine planktonic protist group polycystine radiolaria both in living and fossil form *Marine Science Frontiers for Europe* Gerold Wefer, Frank Lamy, Fauzi Mantoura, 2012-12-06 Europe is a continent with a high coast to surface ratio and European seas encompass a broad range of settings and regimes The sustainable development of living and non living marine resources the protection of the marine environment and the provision of marine based services are critical to economic prosperity and to the quality of life of European citizens Addressing these concerns marine science researchers conducted a workshop reviewing major topics of European marine research This publication contains overview and thematic background papers as well as reports and recommendations for future research covering topics such as ocean climate coupling biogeochemistry coastal and shelf processes and ecosystem functioning biodiversity Biological Oceanography of the Baltic Sea Pauline Snoeijs-Leijonmalm, Hendrik Schubert, Teresa Radziejewska, 2017-04-04 This is the first comprehensive science based textbook on the biology and ecology of the Baltic Sea one of the world s largest brackish water bodies The aim of this book is to provide students and other readers with knowledge about the conditions for life in brackish water the functioning of the Baltic Sea ecosystem and its environmental problems and management It highlights biological variation along the unique environmental gradients of the brackish Baltic Sea Area the Baltic Sea Belt Sea and Kattegat especially those in salinity and climate pt font family Arial sans serif color 262626 The first part of the book presents the challenges for life processes and ecosystem dynamics that result from the Baltic Sea s highly variable recent geological history and geographical isolation The second part explains interactions between organisms and their environment including biogeochemical cycles patterns of biodiversity genetic diversity and evolution biological invasions and physiological adaptations In the third part the subsystems of the Baltic Sea ecosystem the pelagic zone the sea ice the deep soft sea beds the phytobenthic zone the sandy coasts and estuaries and coastal lagoons are treated in detail with respect to the structure

and function of communities and habitats and consequences of natural and anthropogenic constraints such as climate change discharges of nutrients and hazardous substances Finally the fourth part of the book discusses monitoring and ecosystem based management to deal with contemporary and emerging threats to the ecosystem s health **Origin and Evolution of Biodiversity**
