Topcon Total Station Manual Instruction:

Channel-conveyance capacity, channel change, and sediment transport in the lower Puyallup, White, and Carbon Rivers, western Washington Jonathan A. Czuba, Christiana R. Czuba, Christopher S. Magirl, Frank D. Voss, 2010-12-01 Draining the volcanic glaciated terrain of Mount Rainier Washington the Puyallup White and Carbon Rivers convey copious volumes of water and sediment down to Commencement Bay in Puget Sound Recent flooding in the lowland river system has renewed interest in understanding sediment transport and its effects on flow conveyance throughout the lower drainage basin Bathymetric and topographic data for 156 cross sections were surveyed in the lower Puyallup River system by the U S Geological Survey USGS and were compared with similar datasets collected in 1984 Regions of significant aggradation were measured along the Puyallup and White Rivers Between 1984 and 2009 aggradation totals as measured by changes in average channel elevation were as much as 7 5 6 5 and 2 feet on the Puyallup White and Carbon Rivers respectively These aggrading river sections correlated with decreasing slopes in riverbeds where the rivers exit relatively confined sections in the upper drainage and enter the relatively unconstricted valleys of the low gradient Puget Lowland Measured grain size distributions from each riverbed showed a progressive fining downstream Analysis of stage discharge relations at streamflow gaging stations along rivers draining Mount Rainier demonstrated the dynamic nature of channel morphology on river courses influenced by glaciated volcanic terrain The greatest rates of aggradation since the 1980s were in the Nisqually River near National 5 0 inches per year and the White River near Auburn 1 8 inches per year Less pronounced aggradation was measured on the Puyallup River and the White River just downstream of Mud Mountain Dam The largest measured rate of incision was measured in the Cowlitz River at Packwood 5 0 inches per year Channel conveyance capacity estimated using a one dimensional hydraulic model decreased in some river reaches since 1984 The reach exhibiting the largest decrease about 20 50 percent in channel conveyance capacity was the White River between R Street Bridge and the Lake Tapps return a reach affected by recent flooding Conveyance capacity also decreased in sections of the Puyallup River Conveyance capacity was mostly unchanged along other study reaches Bedload transport was simulated throughout the entire river network and consistent with other observations and analyses the hydraulic model showed that the upper Puyallup and White Rivers tended to accumulate sediment Accuracy of the bedload transport modeling however was limited due to a scarcity of sediment transport data sets from the Puyallup system mantling of sand over cobbles in the lower Puyallup and White Rivers and overall uncertainty in modeling sediment transport in gravel bedded rivers Consequently the output results from the model were treated as more qualitative in value useful in comparing geomorphic trends within different river reaches but not accurate in producing precise predictions of mass of sediment moved or deposited The hydraulic model and the bedload transport component were useful for analyzing proposed river management options if surveyed cross sections adequately represented the river management site and proposed management options The hydraulic model showed that setback levees

would provide greater flood protection than gravel bar scalping after the initial project construction and for some time thereafter although the model was not accurate enough to quantify the length of time of the flood protection The greatest hydraulic benefit from setback levees would be a substantial increase in the effective channel conveyance area By widening the distance between levees the new floodplain would accommodate larger increases in discharge with relatively small incremental increases in stage Model simulation results indicate that the hydraulic benefit from a setback levee also would be long lived and would effectively compensate for increased deposition within the setback reach from increased channel conveyance capacity In contrast the benefit from gravel bar scalping would be limited by the volume of material that could be removed and the underlying hydraulics in the river section that would be mostly unaffected by scalping Finally the study formulated an explanation of the flooding that affected Pacific Washington in January 2009 Reduction in channel conveyance capacity of about 25 percent at the White River near Auburn streamflow gaging station between November 2008 and January 2009 was caused by rapid accumulation of coarse grained sediment just downstream of the gage continuing an ongoing trend of aggradation that has been documented repeatedly

Manual of Geospatial Science and Technology John D. Bossler, James B. Campbell, Robert B. McMaster, Chris Rizos, 2010-03-05 Following in the tradition of its popular predecessor the Manual of Geospatial Science and Technology Second Edition continues to be the authoritative volume that covers all aspects of the field both basic and applied and includes a focus on initiating planning and managing GIS projects This comprehensive resource which contains contributio

Surveying: Theory and Practice James M Anderson, Edward M Mikhail, 1998 Drawing accurate topographical plans is a major part of field archaeology and standards need to be right up to the level of civil engineers This is the standard text for all professionals updated to incorporate the latest advances in legislation and technology especially the growth of Global Positioning System GPS precision

Construction Technology for Builders 1e addresses requirements of the Certificate IV in Building and Construction Building The text addresses 14 competency units with learning activities and work sheets for downloading The chapters are aligned to specific competency units and the material in this text requires and emphasises that the reader engage with Standards and Codes such as the NCC Communication is a critical component of the building and construction process and the preparation of sketches and drawings is a vital part of that communication skill set the text has a dedicated chapter on preparing building sketches and drawings There are two chapters on structures the first introducing the concepts underlying structural principles and underpins the following chapter that applies this knowledge to the various elements of a building Additional learning material such as plans and specifications is provided in the Appendices to assist with the understanding of examples and exercises in the text **Topographic Laser Ranging and Scanning** Jie Shan, Charles K. Toth, 2018-02-19 Topographic

Laser Ranging and Scanning Second Edition provides a comprehensive discussion of topographic LiDAR principles systems data acquisition and data processing techniques This edition presents an introduction and summary of various LiDAR systems and their principles and addresses the operational principles of the different components and ranging methods of LiDAR systems It discusses the subsequent geometric processing of LiDAR data with particular attention to quality accuracy and meeting standards and addresses the theories and practices of information extraction from LiDAR data including terrain surface generation forest inventory orthoimage generation building reconstruction and road extraction Written by leaders in the field this comprehensive compilation is a must have reference book for senior undergraduate and graduate students majoring or working in diverse disciplines such as geomatics geodesy natural resources urban planning computer vision and computer graphics It is also vital resource for researchers who are interested in developing new methods and need in depth knowledge of laser scanning and data processing and other professionals may gain the same from the broad topics addressed in this book New in the Second Edition A comprehensive array of new laser ranging and scanning technologies Developments in LiDAR data format and processing techniques Regrouping of surface modeling representations and reconstruction Enhanced discussions on the principles and fundamentals beyond small footprint pulsed laser systems and new application examples Many new examples and illustrations **Surveying Instruments and Technology** Leonid Nadolinets, Eugene

Levin, Daulet Akhmedov, 2017-07-06 With the advent of GPS GNSS satellite navigation systems and Unmanned Aerial Systems UAS surveying profession is nowadays facing its transformative stage Written by a team of surveying experts Surveyor s Instruments and Technology gives surveying students and practitioners profound understanding of how surveying instruments are designed and operating based on surveying instrument functionality The book includes the required basic

knowledge of accurate measurements of distances and angles from theoretical principles to advanced optical mechanical electronic and software components for comparative analysis Readers are presented with basic elements of UAS systems practical interpretation techniques sensor components and operating platforms Appropriate for surveying courses at all levels this guide helps students and practitioners alike to understand what is behind the buttons of surveying instruments of all kinds when considering practical project implementations Guide to Geography Programs in the Americas ,2005
