Diachrony and Dialects Paola Benincà, Adam Ledgeway, Nigel Vincent, 2014-05-29 This book examines diachronic change and diversity in the morphosyntax of Romance varieties spoken in Italy. These varieties offer an especially fertile terrain for research into language change because of both the richness of dialectal variation and the length of the period of textual attestation. While attention in the past has been focussed on the variation found in phonology, morphology and vocabulary, this volume examines variation in morphosyntactic structures covering a range of topics designed to exploit and explore the interaction of the geographical and historical dimensions of change. The opening chapter sets the scene for specialist and non specialist readers alike and establishes the conceptual and empirical background. There follow a series of case studies investigating the morphosyntax of verbal and pro nominal constructions and the organization of the clause. Data are drawn from the full range of Romance dialects spoken within the borders of modern Italy ranging from Sicily and Sardinia through to Piedmont and Friuli. Some of the studies narrow the focus to a particular construction within a particular dialect, others broaden out to compare different patterns of evolution within different dialects. There is also diversity in the theoretical frameworks adopted by the various contributors. The book aims to take stock of both the current state of the field and the fruits of recent research and to set out new results and new questions to help move forward the frontiers of that research. It will be a valuable resource not only for those specializing in the study of Italo-Romance varieties but also for other Romanists and for those interested in exploring and understanding the mechanisms of morphosyntactic change more generally.

The annual Going Romance conference has developed into the major European discussion forum for theoretically relevant research on Romance languages. The present volume testifies to the significance of the analysis of Romance languages for the field of linguistics in general and theoretical linguistics in particular. It contains eleven articles dealing with issues related to all core linguistic domains and interfaces and representing different empirical phenomena. The articles provide data from a significant range of Romance languages and language varieties: French standard, Italian and Italian dialects, Spanish, Catalan, Catalan Contact, Spanish standard and non standard, European Portuguese, Galician as well as

 Videos *Parameter Hierarchies and Universal Grammar* Ian Roberts, 2019-06-20 This book develops a minimalist approach to cross linguistic morphosyntactic variation Ian Roberts argues that the essential insight of the principles and parameters approach to variation can be maintained albeit in a somewhat different guise in the context of the minimalist programme for linguistic theory The central idea is to organize the parameters of Universal Grammar UG into hierarchies that define the ways in which properties of individually variant categories and features may act in concert A further leading idea which is consistent with the overall goal of the minimalist programme to reduce the content of UG is that the parameter hierarchies are not directly determined by UG and are instead emergent properties stemming from the interaction of the three factors in language design Cross linguistic variation in word order null subjects incorporation verb movement case alignment wh movement and negation are all analysed in the light of this approach This book represents a significant new contribution to the formal study of cross linguistic morphosyntactic variation on both the empirical and theoretical levels and will appeal to researchers and students in all areas of theoretical linguistics and comparative syntax **Visualizing Human Biology** Kathleen A.
