Well Completion Design:

Well Completion Design Jonathan Bellarby, 2009-04-13 Completions are the conduit between hydrocarbon reservoirs and surface facilities They are a fundamental part of any hydrocarbon field development project They have to be designed for safely maximising the hydrocarbon recovery from the well and may have to last for many years under ever changing conditions Issues include connection with the reservoir rock avoiding sand production selecting the correct interval pumps and other forms of artificial lift safety and integrity equipment selection and installation and future well interventions Course book based on course well completion design by TRACS International Unique in its field Coverage of offshore subsea and landbased completions in all of the major hydrocarbon basins of the world Full colour

Well Completion and Servicing Denis Perrin, 1999 This book provides technical information on well completion from drilling in the pay zone to production start up It also covers the main methods for artificial lift and well servicing The reader will find a discussion of the concepts and equipment that are indispensable for scheduling and designing completion and servicing operations The book's chief objective is to provide comprehensive information to those who require a thorough understanding of the completion engineer's aims and the resources he needs for oil field development and production It is particularly well suited to the needs of the specialist whose field of activity is located upstream from oil and gas production e.g. geologists geophysicists and reservoir drilling or production facility engineers It should also be of use to oil company administrative personnel including those in management and those in the insurance and legal departments The text is fully illustrated thus helping the reader grasp the basics of this highly technical field
