   Topos Theory P.T. Johnstone,2014-01-15 Focusing on topos theory s integration of geometric and logical ideas into the foundations of mathematics and theoretical computer science this volume explores internal category theory topologies and sheaves geometric morphisms and other subjects 1977 edition   **Sketches of an Elephant** Peter T. Johnstone,2002
   Topos Theory P. T. Johnstone,1977-01-01   *Handbook of Philosophical Logic* D.M. Gabbay,Franz Guenthner,2005-12-15 Intended to comprise some 18 volumes and provides an in depth coverage of major topics in philosophical logic and its applications in many fields relating to computer science language argumentation and more This work is aimed at students and researchers whose work or interests involve philosophical logic and its applications   **From a Geometrical Point of View** Jean-Pierre Marquis,2008-11-20 From a Geometrical Point of View explores historical and philosophical aspects of category theory trying therewith to expose its significance in the mathematical landscape The main thesis is that Klein s Erlangen program in geometry is in fact a particular instance of a general and broad phenomenon revealed by category theory The volume starts with Eilenberg and Mac Lane s work in the early 1940 s and follows the major developments of the theory from this perspective Particular attention is paid to the philosophical elements involved in this development The book ends with a presentation of categorical logic some of its results and its significance in the foundations of mathematics From a Geometrical Point of View aims to provide its readers with a conceptual perspective on category theory and categorical logic in order to gain insight into their role and nature in contemporary mathematics It should be of interest to mathematicians logicians philosophers of mathematics and science in general historians of contemporary mathematics physicists and computer scientists   **Handbook of Categorical Algebra: Volume 3, Sheaf Theory** Francis Borceux,1994-12-08 The Handbook of Categorical Algebra is intended to give in three volumes a rather detailed account of what ideally everybody working in category theory should know whatever the specific topic of research they have chosen The book is planned also to serve as a reference book for both specialists in the field and all those using category theory as a tool Volume 3 begins with the essential aspects of the theory of locales proceeding to a study in chapter 2 of the sheaves on a locale and on a topological space in their various equivalent presentations functors etale maps or W sets Next this situation is generalized to the case of sheaves on a site and the corresponding notion of Grothendieck topos is introduced Chapter 4 relates the theory of Grothendieck toposes with that of accessible categories and sketches by proving the existence of a classifying topos for all coherent theories   **A Second Course in Topos Quantum Theory** Cecilia Flori,2018-02-08 This advanced course a sequel to the first volume of this lecture series on topos quantum theory delves deeper into the theory addressing further technical aspects and recent advances These include but are not limited to the development of physical quantities and self adjoint operators insights into the quantization process the description of an alternative covariant version of topos quantum theory and last but not least the development of a new concept of spacetime The book builds on the concepts introduced in the first

volume published as Lect Notes Phys 868 which presents the main building blocks of the theory and how it could provide solutions to interpretational problems in quantum theory such as What are the main conceptual issues in quantum theory And how can these issues be solved within a new theoretical framework of quantum theory These two volumes together provide a complete basic course on topos quantum theory offering a set of mathematical tools to readers interested in tackling fundamental issues in quantum theory in general and in quantum gravity in particular From the reviews of the first volume The book is self contained and can be used as a textbook or self study manual teaching the usage of category theory and topos theory in particular in theoretical physics or in investigating the foundations of quantum theory in mathematically rigorous terms The book is a very welcome contribution Frank Antonsen Mathematical Reviews December 2013   *Monoidal Category Theory* Noson S. Yanofsky,2024-11-05 A comprehensive cutting edge and highly readable textbook that makes category theory and monoidal category theory accessible to students across the sciences Category theory is a powerful framework that began in mathematics but has since expanded to encompass several areas of computing and science with broad applications in many fields In this comprehensive text Noson Yanofsky makes category theory accessible to those without a background in advanced mathematics Monoidal Category Theorydemonstrates the expansive uses of categories and in particular monoidal categories throughout the sciences The textbook starts from the basics of category theory and progresses to cutting edge research Each idea is defined in simple terms and then brought alive by many real world examples before progressing to theorems and uncomplicated proofs Richly guided exercises ground readers in concrete computation and application The result is a highly readable and engaging textbook that will open the world of category theory to many Makes category theory accessible to non math majors Uses easy to understand language and emphasizes diagrams over equations Incremental iterative approach eases students into advanced concepts A series of embedded mini courses cover such popular topics as quantum computing categorical logic self referential paradoxes databases and scheduling and knot theory Extensive exercises and examples demonstrate the broad range of applications of categorical structures Modular structure allows instructors to fit text to the needs of different courses Instructor resources include slides

Categorical Aspects of Topology and Analysis B. Banaschewski,2006-11-14   Mathematical Applications of Category Theory American Mathematical Society. Meeting,John Walker Gray,1984 Contains the proceedings of the AMS Summer Research Conference on Axiomatic Set Theory held in Boulder Colorado June 19 25 1983 This work covers the various areas of set theory including constructibility forcing combinatorics and descriptive set theory   **Category Theory in Context** Emily Riehl,2017-03-09 Introduction to concepts of category theory categories functors natural transformations the Yoneda lemma limits and colimits adjunctions monads revisits a broad range of mathematical examples from the categorical perspective 2016 edition   Categorical Algebra and its Applications Francis Borceux,2006-11-14 Categorical algebra and its applications contain several fundamental papers on general category theory by the top specialists in the field

and many interesting papers on the applications of category theory in functional analysis algebraic topology algebraic geometry general topology ring theory cohomology differential geometry group theory mathematical logic and computer sciences The volume contains 28 carefully selected and refereed papers out of 96 talks delivered and illustrates the usefulness of category theory today as a powerful tool of investigation in many other areas **The Mathematical and Philosophical Legacy of Alexander Grothendieck** Marco Panza,Daniele C. Struppa,Jean-Jacques Szczeciniarz,2025-01-21 Alexander Grothendieck is often considered one of the greatest mathematicians of the twentieth century if not all time and his unique vision continues to impact and inspire many fields and researchers today Utilizing a multidisciplinary approach this edited volume explores the profound influence his work and ideas have had not only on mathematics but also on logic and philosophy Chapters are written by international scholars and many were inspired by talks given at the conference Grothendieck A Multifarious Giant at Chapman University May 24 28 2022 Some chapters are written from a historical perspective and discuss the development of the main themes that characterized Grothendieck s work Others are more mathematical in nature analyzing and extending some of his more relevant and obscure results that are still not well understood Philosophical implications and applications in logic are the subjects of other chapters This volume will be of interest not only to mathematicians working in algebraic geometry category theory and other areas to which Grothendieck contributed but also to philosophers logicians and historians of science **Advances In Theory And Formal Methods Of Computing: Proceedings Of The Third Imperial College Workshop** Abbas Edalat,S Jourdan,G Mccusker,1996-10-25 This volume contains the proceedings of the third workshop of the Theory and Formal Methods Section of the Department of Computing Imperial College London It covers various topics in theoretical computer science Formal specification theorem proving operational and denotational semantics real number computation computational measure theory and neural networks are all represented **Proof And Computation Ii: From Proof Theory And Univalent Mathematics To Program Extraction And Verification** Klaus Mainzer,Helmut Schwichtenberg,Peter Michael Schuster,2021-07-27 This book is for graduate students and researchers introducing modern foundational research in mathematics computer science and philosophy from an interdisciplinary point of view Its scope includes proof theory constructive mathematics and type theory univalent mathematics and point free approaches to topology extraction of certified programs from proofs automated proofs in the automotive industry as well as the philosophical and historical background of proof theory By filling the gap between under graduate level textbooks and advanced research papers the book gives a scholarly account of recent developments and emerging branches of the aforementioned fields **Galois Theory, Hopf Algebras, and Semiabelian Categories** George Janelidze,2004 This volume is based on talks given at the Workshop on Categorical Structures for Descent and Galois Theory Hopf Algebras and Semiabelian Categories held at The Fields Institute for Research in Mathematical Sciences Toronto ON Canada The meeting brought together researchers working in these interrelated areas

This collection of survey and research papers gives an up to date account of the many current connections among Galois theories Hopf algebras and semiabeliancategories The book features articles by leading researchers on a wide range of themes specifically abstract Galois theory Hopf algebras and categorical structures in particular quantum categories and higher dimensional structures Articles are suitable for graduate students and researchers specifically those interested in Galois theory and Hopf algebras and their categorical unification Galois Theory, Hopf Algebras, and Semiabelian Categories George Janelidze, Bodo Pareigis, and Walter Tholen, **Generalised Algebraic Models** Claudia Centazzo,2004 Algebraic theories and algebraic categories offer an innovative and revelatory description of the syntax and the semantics An algebraic theory is a concrete mathematical object the concept namely a set of variables together with formal symbols and equalities between these terms stated otherwise an algebraic theory is a small category with finite products An algebra or model of the theory is a set theoretical interpretation a possible meaning or more categorically a finite product preserving functor from the theory into the category of sets We call the category of models of an algebraic theory an algebraic category By generalising the theory we do generalise the models This concept is the fascinating aspect of the subject and the reference point of our project We are interested in the study of categories of models We pursue our task by considering models of different theories and by investigating the corresponding categories of models they constitute We analyse localizations namely fully faithful right adjoint functors whose left adjoint preserves finite limits of algebraic categories and localizations of presheaf categories These are still categories of models of the corresponding theory We provide a classification of localizations and a classification of geometric morphisms namely functors together with a finite limit preserving left adjoint in both the presheaf and the algebraic context Algebraic Computability and Enumeration Models Cyrus F. Nourani,2016-02-24 This book Algebraic Computability and Enumeration Models Recursion Theory and Descriptive Complexity presents new techniques with functorial models to address important areas on pure mathematics and computability theory from the algebraic viewpoint The reader is first introduced to categories and functorial models with Kleene algebra examples **Handbook of Spatial Logics** Marco Aiello,Ian Pratt-Hartmann,Johan van Benthem,2007-09-04 The aim of this handbook is to create for the first time a systematic account of the field of spatial logic The book comprises a general introduction followed by fourteen chapters by invited authors Each chapter provides a self contained overview of its topic describing the principal results obtained to date explaining the methods used to obtain them and listing the most important open problems Jointly these contributions constitute a comprehensive survey of this rapidly expanding subject
