Structural Analysis of Historical Constructions: Anamnesis, Diagnosis, Therapy, Controls Koen Van Balen, Els Verstrynghe, 2016-11-03 Structural Analysis of Historical Constructions: Anamnesis, diagnosis, therapy, controls contains the papers presented at the 10th International Conference on Structural Analysis of Historical Constructions SAHC2016, Leuven, Belgium, 13-15 September 2016. The main theme of the book is Anamnesis, Diagnosis, Therapy, Controls, which emphasizes the importance of all steps of a restoration process in order to obtain a thorough understanding of the structural behaviour of built cultural heritage. The contributions cover every aspect of the structural analysis of historical constructions, such as material characterization, structural modelling, static and dynamic monitoring, non-destructive techniques for on-site investigation, seismic behaviour, rehabilitation, traditional and innovative repair techniques and case studies. A special focus has been put on six specific themes: Innovation and heritage, Preventive conservation, Computational strategies for heritage structures, Sustainable strengthening of masonry with composites, Values and sustainability, and Subsoil interaction. The knowledge, insights and ideas in Structural Analysis of Historical Constructions: Anamnesis, diagnosis, therapy, controls make this book of abstracts and the corresponding digital full-colour conference proceedings containing the full papers must-have literature for researchers and practitioners involved in the structural analysis of historical constructions. *The Architecture Reference & Specification Book* Julia McMorrough, 2013-08 Most architectural standards references contain thousands of pages of details overwhelmingly more than architects need to know to know on any given day.
