The Nervous System

The nervous system is an extremely complex, highly intricate, and very sensitive structure that occupies the entire body. The main primary cells of the nervous system are neurons, but actually carry and carry information, and glial cells that support the neurons. The nervous system is divided into central nervous system (CNS) and peripheral nervous system (PNS).

Central Nervous System

The central nervous system, or CNS, is the brain and spinal cord. The brain is the most complex part of the nervous system. It is located in the head and is divided into the cerebrum, cerebellum, and brainstem. The spinal cord is located in the back and is divided into the cervical, thoracic, lumbar, and sacral regions. The CNS is responsible for processing information and controlling the body's responses.

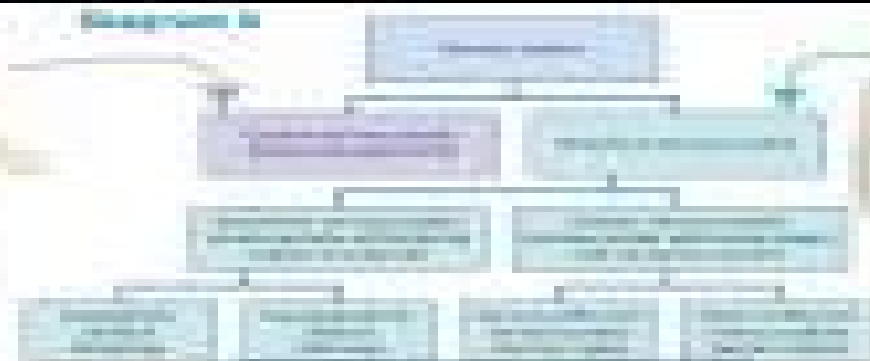

Peripheral Nervous System

The peripheral nervous system, or PNS, is the part of the nervous system that is outside the CNS. It includes all the nerves that carry information between the CNS and the rest of the body. The PNS is divided into the somatic nervous system, which controls voluntary movements, and the autonomic nervous system, which controls involuntary functions.

The PNS is divided into the somatic nervous system, which controls voluntary movements, and the autonomic nervous system, which controls involuntary functions. The somatic nervous system is divided into the motor and sensory pathways. The motor pathway carries information from the brain to the muscles, and the sensory pathway carries information from the muscles back to the brain. The autonomic nervous system is divided into the sympathetic and parasympathetic systems. The sympathetic system is responsible for the "fight or flight" response, and the parasympathetic system is responsible for the "rest and digest" response.

The Brain

The brain is the most complex part of the nervous system. It is located in the head and is divided into the cerebrum, cerebellum, and brainstem. The cerebrum is the largest part of the brain and is responsible for most of the body's functions. The cerebellum is located at the back of the brain and is responsible for coordination and balance. The brainstem is located at the base of the brain and is responsible for basic life functions.
