The Nervous System

The nervous system is an extremely complex, highly intricate, and very sensitive structure that regulates everything that happens throughout the human body. The main purpose of all the nervous system and its various parts is to carry and send information, and give the body signals that control the movements. The nervous system is basically made of two systems: somatic and autonomic, depending on the functions that they perform.

Central Nervous System

The central nervous system, or CNS, is made up of the brain and spinal cord. The brain is the most important part of the nervous system. It is located in the head and is the center of all the body's activities. It is made up of billions of neurons that are connected to each other. The brain is the control center of the body, and it is responsible for all the body's functions. The spinal cord is a long, thin, tube-like structure that runs down the back. It is made up of billions of neurons that are connected to each other. The spinal cord is the main communication pathway between the brain and the rest of the body.

Peripheral Nervous System

There are all parts of the nervous system that are not the brain and spinal cord, and they make up the peripheral nervous system, or PNS. The PNS is made up of all the nerves that are outside the brain and spinal cord. It is responsible for carrying information from the brain and spinal cord to the rest of the body. The PNS is made up of all the nerves that are outside the brain and spinal cord. It is responsible for carrying information from the brain and spinal cord to the rest of the body.

The PNS is divided into two main parts: the somatic nervous system, which controls the body's voluntary movements, and the autonomic nervous system, which controls the body's involuntary functions. The somatic nervous system is made up of all the nerves that carry information from the brain and spinal cord to the muscles and organs of the body. The autonomic nervous system is made up of all the nerves that carry information from the brain and spinal cord to the internal organs of the body. The autonomic nervous system is further divided into two parts: the sympathetic nervous system, which is responsible for the body's "fight or flight" response, and the parasympathetic nervous system, which is responsible for the body's "rest and digest" response.
