prominently in these modern treatments are introduced at appropriate places The main theme of Volume I is the analysis of linear fragmentation models with Volume II devoted to processes that involve the nonlinear contribution of coagulation Features of Volume II A primer on weak compactness in L^1 and dynamical systems A comprehensive theory of solvability of the coagulation fragmentation equation by both the semigroup and weak compactness methods including a thorough analysis of the gelation and shattering phenomena A detailed analysis of the long term dynamics of the coagulation fragmentation equations with a state of the art discussion on self similar solutions *Engineering Mathematics - Volume II* Pal
