Organized Crime reluctantly combines two highly contested concepts into a statement that is perhaps disputed even more. Who and what do we refer to when we talk about outlaw bikers and outlaw biker clubs? What is meant by organized crime? And how, if at all, are these two concepts related? All the chapters in this volume deal with these questions some way or the other, either explicitly or implicitly, each providing its own answers based on the data and methods at hand. This volume presents cutting edge research on outlaw bikers and outlaw biker clubs from countries all over the globe and reflects the different ways that academic researchers have approached the outlaw biker phenomenon from the theoretical and methodological vantage point of organized crime research.

The report analyses an enormous body of observations of all parts of the climate system. Catalogues increasing concentrations of atmospheric greenhouse gases. Assesses our understanding of the processes and feedbacks which govern the climate system. Projects scenarios of future climate change using a wide range of models of future emissions of greenhouse gases and aerosols. Makes a detailed study of whether a human influence on climate can be identified. Suggests gaps in information and understanding that remain in our knowledge of climate change and how these might be addressed. This latest IPCC assessment will again form the standard scientific reference for all concerned with climate change and its consequences, including students and researchers in all aspects of environmental and atmospheric science and policymakers in governments and industry worldwide.
