Statistical Data Analysis and Inference Y. Dodge, 2014-05-23 A wide range of topics and perspectives in the field of statistics are brought together in this volume The contributions originate from invited papers presented at an international conference which was held in honour of C Radhakrishna Rao one of the most eminent statisticians of our time and a distinguished scientist **Stochastic Epidemic Models and Their Statistical Analysis** Hakan Andersson, Tom Britton, 2012-12-06 The present lecture notes describe stochastic epidemic models and methods for their statistical analysis Our aim is to present ideas for such models and methods for their analysis along the way we make practical use of several probabilistic and statistical techniques This will be done without focusing on any specific disease and instead rigorously analyzing rather simple models The reader of these lecture notes could thus have a two fold purpose in mind to learn about epidemic models and their statistical analysis and or to learn and apply techniques in probability and statistics The lecture notes require an early graduate level knowledge of probability and They introduce several techniques which might be new to students but our statistics intention is to present

these keeping the technical level at a minimum Techniques that are explained and applied in the lecture notes are for example coupling diffusion approximation random graphs likelihood theory for counting processes martingales the EM algorithm and MCMC methods The aim is to introduce and apply these techniques thus hopefully motivating their further theoretical treatment A few sections mainly in Chapter 5 assume some knowledge of weak convergence we hope that readers not familiar with this theory can understand these parts at a heuristic level The text is divided into two distinct but related parts modelling and estimation *Statistical Data Mining and Knowledge Discovery* Hamparsum

Bayesian Hierarchical Models Peter D. Congdon, 2019-09-16 An intermediate level treatment of Bayesian hierarchical models and their applications this book demonstrates the advantages of a Bayesian approach to data sets involving inferences for collections of related units or variables and in methods where parameters can be treated as random collections Through illustrative data analysis and attention to statistical computing this book facilitates practical implementation of Bayesian hierarchical methods The new edition is a revision of the book *Applied Bayesian Hierarchical Methods* It maintains a focus on applied modelling and data analysis but now using entirely R based Bayesian computing options It has been updated with a new chapter on regression for causal effects and one on computing options and strategies This latter chapter is particularly important due to recent advances in Bayesian computing and estimation including the development of rjags and rstan It also features updates throughout with new examples The examples exploit and illustrate the broader advantages of the R computing environment while allowing readers to explore alternative likelihood assumptions regression structures and assumptions on prior densities Features Provides a comprehensive and accessible overview of applied Bayesian hierarchical modelling Includes many real data examples to illustrate different modelling topics R code based on rjags jagsUI R2OpenBUGS and rstan is integrated into the book emphasizing implementation Software options and coding principles are introduced in new chapter on computing Programs and data sets available on the book's website *The Oxford Handbook of Panel Data* Badi Hani Baltagi, 2015 The Oxford Handbook of Panel Data examines new developments in the theory and

Demographic Aspects of Migration Thomas Salzmann,Barry Edmonston,James

Raymer,2010-08-24 Dr Albert Schmid President of the Federal Office for Migration and Refugees According to the United Nations about 200 million people of the estimated world population of 6.8 billion are international migrants that corresponds to about three per cent of the total world population The proportion of international migrants in the global population has increased only marginally in the last 40 years But as a result of global population growth the absolute number of migrants has increased and their structure and spatial distribution has changed considerably A structural shift has taken place primarily in the industrialised countries where less than 20 per cent of the global workers are now living but where more than 60 per cent of all migrants worldwide reside Since 1990 more than 16 million people have moved to Germany while about 11 million have left the country in the same period Altogether 15 million people of international migration origin are living in Germany comprising almost 19 per cent of Germany's current population of 82 million At the end of 2006 about 64 million people out of Europe's population of 732 million or nine per cent lived in a European country they were not born in But why does anybody migrate at all People decide to leave because in general they expect to find better conditions and opportunities in other countries or regions

Count Data Models Rainer Winkelmann,2013-11-11 This book presents

statistical methods for the analysis of events The primary focus is on single equation cross section models The book addresses both the methodology and the practice of the subject and it provides both a synthesis of a diverse body of literature that hitherto was available largely in pieces as well as a contribution to the progress of the methodology establishing several new results and introducing new models Starting from the standard Poisson regression model as a benchmark the causes symptoms and consequences of misspecification are worked out Both parametric and semi parametric alternatives are discussed While semi parametric models allow for robust inference parametric models can identify

features of the underlying data generation process *Global Flow of Funds Analysis* Nan Zhang,Yiye Zhang,2024-03-18 This book is the first to focus on the global flow of funds GFF providing an introduction to its fundamental concepts and establishing a theoretical framework for analysis It connects the flow of funds within domestic economies to that of the rest of the world offering a comprehensive analysis of GFF dynamics This study enhances GFF statistics enabling the assessment of global financial stability from both national and cross border sectoral perspectives The GFF data provide valuable insights into analyzing interconnectivity across borders and an understanding of global financial interdependencies By examining the data sources and reconstructing the statistical framework to establish the GFF statistical matrix this book conducts a case study to evaluate financial risks and influences in G20 countries Subsequently it connects the GFF matrix with sectoral account data and the flow of funds to establish the sectoral from whom to whom financial stock matrix SFSM The SFSM aims to establish a new framework for conducting multi country multi sector analysis within the G20 with a special emphasis on examining the national and cross border exposures of sectors in China Japan and the USA This involves constructing country specific financial networks and connecting them based on cross border exposures The systematic analysis results effectively showcase the financial interconnections among G20 countries within the GFF and shed light on the attributes of external shocks and internal influences The focus is particularly on the changes in risk exposure between China and the USA concerning their external assets and liabilities and the implications of economic decoupling of these dynamics **NoSQL**

Dynamic Prediction in Clinical Survival Analysis Hans van Houwelingen, Hein Putter, 2011-11-09 There is a huge amount of literature on statistical models for the prediction of survival after diagnosis of a wide range of diseases like cancer cardiovascular disease and chronic kidney disease Current practice is to use prediction models based on the Cox proportional hazards model and to present those as static models for remaining lifetime after diagnosis or treatment In contrast Dynamic Prediction in Clinical Survival Analysis focuses on dynamic models for the remaining lifetime at later points in time for instance using landmark models Designed to be useful to applied statisticians and clinical epidemiologists each chapter in the book has a practical focus on the issues of working with real life data Chapters conclude with additional material either on the interpretation of the models alternative models or theoretical background The book consists of four parts Part I deals with prognostic models for survival data using clinical information available at baseline based on the Cox model Part II is about prognostic models for survival data using clinical information available at baseline when the proportional hazards assumption of the Cox model is violated Part III is dedicated to the use of time dependent information in dynamic prediction Part IV explores dynamic prediction models for survival data using genomic data Dynamic Prediction in Clinical Survival Analysis summarizes cutting edge research on the dynamic use of predictive models with traditional and new approaches Aimed at applied statisticians who actively analyze clinical data in collaboration with clinicians the analyses of the different data sets throughout the book demonstrate how predictive models can be obtained from proper data sets
