Star-Formation Rates of Galaxies Andreas Zezas, Véronique Buat, 2021-04-29 Star formation is one of the key processes that shape the current state and evolution of galaxies This volume provides a comprehensive presentation of the different methods used to measure the intensity of recent or on going star forming activity in galaxies discussing their advantages and complications in detail It includes a thorough overview of the theoretical underpinnings of star formation rate indicators including topics such as stellar evolution and stellar spectra the stellar initial mass function and the physical conditions in the interstellar medium The authors bring together in one place detailed and comparative discussions of traditional and new star formation rate indicators star formation rate measurements in different spatial scales and comparisons of star formation rate indicators probing different stellar populations along with the corresponding theoretical background This is a useful reference for students and researchers working in the field of extragalactic astrophysics and studying star formation in local and higher redshift galaxies

Unfolding the Labyrinth: Open Problems in Physics, Mathematics, Astrophysics, and other areas of science Florentin Smarandache, V. Christianto, 2006-01-01 Throughout this book we discuss some open problems in various branches of science including mathematics theoretical physics astrophysics geophysics etc It is of our hope that some of the problems discussed in this book will find their place either in theoretical exploration or further experiments while some parts of these problems may be found useful for scholarly stimulation The present book is also intended for young physics and mathematics fellows who will perhaps find the unsolved problems

described here are at least worth pondering If this book provides only a few highlights of plausible solutions it is merely to keep the fun of readers in discovering the answers by themselves Bon voyage

Dynamics of Young Star Clusters and Associations Cathie Clarke, Robert D. Mathieu, Iain Neill Reid, 2015-09-11 Where do most stars and the planetary systems that surround them in the Milky Way form What determines whether a young star cluster remains bound such as an open or globular cluster or disperses to join the field stars in the disc of the Galaxy These questions not only impact understanding of the origins of stars and planetary systems like our own and the potential for life to emerge that they represent but also galaxy formation and evolution and ultimately the story of star formation over cosmic time in the Universe This volume will help readers understand our current views concerning the answers to these questions as well as frame new questions that will be answered by the European Space Agency s Gaia satellite that was launched in late 2013 The book contains the elaborated notes of lectures given at the 42nd Saas Fee Advanced Course Dynamics of Young Star Clusters Associations by Cathie Clarke University of Cambridge who presents the theory of star formation and dynamical evolution of stellar systems Robert Mathieu University of Wisconsin who discusses the kinematics of star clusters and associations and I Neill Reid Space Telescope Science Institute who

provides an overview of the stellar populations in the Milky Way and speculates on from whence came the Sun As part of the Saas Fee Advanced Course Series the book offers an in depth introduction to the field serving as a starting point for Ph D research and as a reference work for professional astrophysicists Stellar Rotation Arnold Hanslmeier,Roman Brajša,2024-06-25 This textbook highlights mechanisms properties observations and research progress of solar and stellar rotation The rotation of stars is a basic parameter that enters into the dynamo mechanisms that generates stellar activity The faster stars rotate the higher stellar activity Moreover the rotation can also be used to determine stellar ages Only in the case of the Sun we can directly observe details and therefore determine e g the differential rotation Thus the Sun is a prototype for studying other stars The textbook presents techniques that enable to determine rotation on stars and give a comparison of how stars rotate according to their spectral type and evolution Special cases are given such as rapidly rotating stars that are strongly deformed into ellipsoids The textbook is intended for professionals and students in Astrophysicists as well as readers interested in science in general *Dynamical Astrochemistry* David A Williams,Thomas W Hartquist,Jonathan M C Rawlings,Cesare Cecchi-Pestellini,Serena Viti,2017-12-13 Astrochemistry is a well established interdisciplinary subject and the methods for describing time dependent chemistry in static or slowly changing regions of interstellar space have been well developed over many years Existing astrochemical books normally describe the subject in terms of chemistry in static or slowly varying astronomical situations but the most significant astronomical regions are those in which the physical conditions change on timescales that are comparable to or shorter than chemical timescales Written by leading experts in this area this is the first book specifically devoted to the astrochemistry of dynamically evolving astronomical regions It provides a comprehensive description of this important area of science stressing in particular the methods that have been developed for specific purposes It will be of interest to researchers in astrochemistry including both chemists and physicists **Enanas marrones** María Cruz Gálvez Ortíz,2019-02-04 Las enanas marrones no son estrellas pero emiten luz usando como combustible deuterio en vez de hidr geno Tampoco son planetas aunque algunos l mites entre unas y otros a n no est n claros En 1995 se anunci el descubrimiento de la primera enana marr n confirmada y en estos 23 a os se ha avanzado mucho en el estudio de estos objetos se han descubierto un par de miles de enanas marrones y se ha desarrollado un mbito nuevo de la astronom a En un futuro pr ximo los astrof sicos tal vez puedan dar mejores respuestas a las muchas preguntas que quedan por contestar sobre ellas c mo se forman c mo se comportan sus atm sferas y qu clima tienen son las m s adecuadas para buscar exotierras El objetivo es dar una visi n global de las enanas marrones dejar clara su naturaleza no estelar ver c mo se buscan c mo se cree que se forman qu caracter sticas tienen y c mo se han clasificado en funci n de esas caracter sticas *Principles of Star Formation* Peter Bodenheimer,2011-07-10 Understanding star formation is one of the key fields in present day astrophysics This book treats a wide variety of the physical processes involved as well as the main observational discoveries with key

points being discussed in detail The current star formation in our galaxy is emphasized because the most detailed observations are available for this case The book presents a comparison of the various scenarios for star formation discusses the basic physics underlying each one and follows in detail the history of a star from its initial state in the interstellar gas to its becoming a condensed object in equilibrium Both theoretical and observational evidence to support the validity of the general evolutionary path are presented and methods for comparing the two are emphasized The author is a recognized expert in calculations of the evolution of protostars the structure and evolution of disks and stellar evolution in general This book will be of value to graduate students in astronomy and astrophysics as well as to active researchers in the field

The Physics of Star Formation and Early Stellar Evolution Charles J.

Lada,N.D. Kylafis,2012-12-06 The origin of stars is one of the principle mysteries of nature During the last two decades advances in technology have enabled more progress to be made in the quest to understand stellar origins than at any other time in history The study of star formation has developed into one of the most important branches of modern astrophysical research A large body of observational data and a considerable literature now exist concerning this topic and a large community of international astronomers and physicists devote their efforts attempting to decipher the secrets of stellar birth Yet the young astronomer/physicist or more advanced researcher desiring to obtain a basic background in this area of research must sift through a very diverse and sometimes bewildering literature A literature which includes research in many disciplines and sub disciplines of classical astrophysics from stellar structure to the interstellar medium and encompasses the entire range of the electromagnetic spectrum from radio to gamma rays Often the reward of a successful foray through the current literature is the realization that the results can be obsolete and outdated as soon as the ink is dry in the journal or the conference proceeding in which they are published

An Introduction to Star Formation Derek

Ward-Thompson,Anthony P. Whitworth,2011-02-10 Guiding the reader through all the stages that lead to the formation of a star such as our Sun this advanced textbook provides students with a complete overview of star formation It examines the underlying physical processes that govern the evolution from a molecular cloud core to a main sequence star and focuses on the formation of solar mass stars Each chapter combines theory and observation helping readers to connect with and understand the theory behind star formation Beginning with an explanation of the interstellar medium and molecular clouds as sites of star formation subsequent chapters address the building of typical stars and the formation of high mass stars concluding with a discussion of the by products and consequences of star formation This is a unique self contained text with sufficient background information for self study and is ideal for students and professional researchers alike

The Interstellar Medium, Expanding Nebulae and Triggered Star Formation Thomas G. Bisbas,2015-11-24 This brief brings together the theoretical aspects of star formation and ionized regions with the most up to date simulations and observations Beginning with the basic theory of star formation the physics of expanding HII regions is reviewed in detail and a discussion on how a massive star can give birth to tens or hundreds of other stars follows The theoretical description of star formation is shown in simplified and state of the art numerical simulations describing in a more clear way how feedback from massive stars can trigger star and planet formation This is also combined with spectacular images of nebulae taken by talented amateur astronomers The latter is very likely to stimulate the reader to observe the structure of nebulae from a different point of view and better understand the associated star formation therein

Star Formation Andrei M.

Bykov,Corinne Charbonnel,Patrick Hennebelle,Alexandre Marcowith,Georges Meynet,Maurizio Falanga,Rudolf von Steiger,2020-10-13 The review papers in this volume provide an in depth examination of complex astrophysical phenomena of star formation via multi wavelength observations and modeling Among the fundamental issues discussed in the book are The

role of gravity and magnetized turbulence in the formation and evolution of molecular clouds The stellar feedback
supernovae HII regions winds cosmic rays in regulating star formation The origin of the stellar initial mass function and its
universality across various environments Jets magnetic fields and high energy particles in stellar clusters The origin of the
first stars and black holes The goal of these papers is to review the major processes governing star formation and to
investigate how they are interlinked In doing so they provide an in depth look at the tremendous theoretical and
observational progress that has been made in the recent past and also outline future perspectives Previously published in
