### The Nervous System

The nervous system is an extremely complex, highly intricate, and very sensitive structure that regulates everything that happens throughout the human body. The main purpose of all the nervous system and its various parts is to carry and send information, and give the body signals that control the muscles. The nervous system is basically made of two systems: the central nervous system (CNS) and the peripheral nervous system (PNS).

### Central Nervous System

The central nervous system, or CNS, is the part of the nervous system that is located in the brain and spinal cord. It is the most complex part of the nervous system. The brain is the control center of the body, and is located within the protective hard skull. Layers of meninges and cerebrospinal fluid also protect the CNS. The spinal cord consists of the lower part of the CNS, and is located in the vertebral column. It is the main pathway for the transmission of information between the brain and the rest of the body.

### Peripheral Nervous System

There are all parts of the nervous system that are not the CNS, and they make up the peripheral nervous system (PNS). The PNS is made up of all sensory neurons that are capable of receiving stimuli, and all motor neurons that are capable of responding to stimuli. For example, sensory neurons in the eye and ear receive light and sound information, and send it to the brain. Motor neurons in the muscles and glands receive information from the brain and send it to the muscles and glands.

The PNS is divided into the somatic and autonomic nervous systems. The somatic nervous system is responsible for the voluntary control of the body's movements. It consists of the brain, spinal cord, and all the sensory and motor neurons that are involved in the control of the body's movements. The autonomic nervous system is responsible for the involuntary control of the body's functions. It consists of the brain, spinal cord, and all the sensory and motor neurons that are involved in the control of the body's functions. The autonomic nervous system is divided into the sympathetic and parasympathetic systems. The sympathetic system is responsible for the "fight or flight" response, and the parasympathetic system is responsible for the "rest and digest" response.

### The Brain

The brain is the most complex part of the nervous system. It is the control center of the body, and is responsible for all the functions of the body. The brain is made up of billions of neurons, which are the basic units of the nervous system. The brain is divided into three main parts: the cerebrum, the cerebellum, and the brainstem. The cerebrum is the largest part of the brain, and is responsible for most of the body's functions. The cerebellum is located at the back of the brain, and is responsible for coordination and balance. The brainstem is located at the base of the brain, and is responsible for basic functions like breathing and heart rate.
