Kahn,Siqi Zheng,2016-05-17 How individuals and the government are changing life in China s polluted cities Over the past thirty years even as China s economy has grown by leaps and bounds the environmental quality of its urban centers has precipitously declined due to heavy industrial output and coal consumption The country is currently the world s largest greenhouse gas emitter and several of the most polluted cities in the world are in China Yet millions of people continue moving to its cities seeking opportunities Blue Skies over Beijing investigates the ways that China s urban development impacts local and global environmental challenges Focusing on day to day choices made by the nation s citizens families and government Matthew Kahn and Siqi Zheng examine how Chinese urbanites are increasingly demanding cleaner living conditions and consider where China might be headed in terms of sustainable urban growth Kahn and Zheng delve into life in China s cities from the personal perspectives of the rich middle class and poor and how they cope with the stresses of

identify priorities assess and quantify the opportunities and measures that improve the overall building performance and the environmental quality and well being of occupants in non residential buildings and houses Several case studies and lessons learned from the field are presented to help the readers identify quantify and prioritize effective energy conservation and efficiency measures Finally a new urban sustainability audit and rating method of the built environment addresses the complexities of the various issues involved providing practical tools that can be adapted to match local priorities in order to diagnose and evaluate the current state and future scenarios towards meeting specific sustainable development goals and local priorities

The Case for Climate Capitalism Tom Rand, 2020-03-03 A call for the Left and Right the business community and environmentalists bankers and activists to join together reclaim capitalism and force profits to align with the planet A warming climate and a general distrust of Wall Street has opened a new cultural divide among those who otherwise agree we must mitigate climate risk anti market critics such as Naomi Klein target capitalism itself as a root cause of climate change while climate savvy business leaders believe we can largely continue with business as usual by tinkering around the edges of our economic system Rand argues that both sides in this emerging cultural war are ill equipped to provide solutions to the climate crisis and each is remarkably naïve in their view of capitalism On one hand we cannot possibly transition off fossil fuels without the financial might and entrepreneurial talent market forces alone can unlock On the other without radical changes to the way markets operate capitalism will take us right off the climate cliff Rejecting the old Left Right ideologies Rand develops a more pragmatic view capable of delivering practical solutions to this critical problem A renewed capitalism harnessed to the task is the only way we might replace fossil fuels fast enough to mitigate severe climate risk If we leave our dogma at the door Rand argues we might just build an economy that survives the century

Foreign Investment, International Law and Common Concerns Tullio Treves, Francesco Seatzu, Seline Trevisanut, 2013-10-23 Increasingly transnational corporations developed countries and private actors are broadening the boundaries of their investments into new territories in search of a higher return on capital This growth in direct foreign investment involves serious concerns for both the investor and host state Various exponents of international civil society and non governmental organisations persuasively claim that such growth in foreign investments constitutes potential and serious hazards both to the environment and the fundamental rights and freedoms of local populations This book explores from an international law perspective the complex relationship between foreign investments and common concerns i e values that do not coincide or do not necessarily coincide with the interests of the investor and of the host state It pays particular attention to the role of the main international development banks in reconciling the needs of foreign investors with the protection of common concerns such as the environment human rights and labour rights Among its collection of essays the volume asks how much regulatory space investment law leaves whether international investment law

is an effective means of balancing contrasting interests and whether investment arbitration currently constitutes a mechanism of global governance In collecting the outlooks of various experts in human rights environmental and international economic law this book breaks new ground in exploring how attention to its legal aspects may help in navigating the relationship between foreign investment and common concerns In doing so the book provides valuable insights into the substantive issues and institutional aspects of international investment law Black Gold, Black Swans: The importance of the unexpected for the future of energy Ullrich Müller, 2013-12-17 The present study is the result of the attempt to subject the socio economic world of energy to an analysis regarding a phenomenon called the Black Swan This concept has been made popular by Nassim Nicholas Taleb who has become a widely cited point of reference ever since the beginning of the financial crisis in 2007 The underlying assumption is that against commonly held believe it is not a long chain of incremental and statistically relevant events that constitutes history but a seemingly insignificant number of outliers or hence Black Swans Consequently the study focuses on a critical examination of the strategic prediction models used in the energy business today which are mainly based on driver based models These models try to predict future price and value chain developments ultimately searching for a strategic direction This study questions this approach by showing that time and again similar predictions have been rendered obsolete by real developments Based on the findings of this historical analysis the study raises the question whether it is possible to draw any practical conclusions for the future discussing methods which could provide protection from Black Swan events
