Nickolas

Dorfman, 2008-09 In this book the author is trying to explain some unique phenomena of the Nature using scientific data speculations logic and fantasy The main point of this book is to show that the mainstream science is going too deep into physics and chemistry limiting science to only molecules and energy and dismissing any spiritual ideas A simple logic can clearly indicate that inanimate molecules and energy just cannot be so smart to create numerous masterpieces of human civilization We should not ignore the fact that there is something very fundamental in the Universe that we still know nothing about Short sightedness of materialistic views will never let us approach the secret of human mind We can discover millions of new genes and get knowledge of zillions new biochemical reactions but all these will never let us know how Mona Lisa was created or how inanimate molecules in human brain could build space crafts and send sophisticated robots into space to investigate the secrets of Mother Nature This book cannot give you all answers but it could give you some new thoughts or ideas **Animals, Ethics, and Engineering** Rosalyn W. From Brain to Mind James E. Zull, 2023-07-03 Finalist for Foreword Magazine's 2011 Book of the Year With his knack for making science intelligible for the layman and his ability to illuminate scientific concepts through analogy and reference to personal experience James Zull offers the reader an engrossing and coherent introduction to what neuroscience can tell us about cognitive development through experience and its implications for education Stating that educational change is underway and that the time is ripe to recognize that the primary objective of education is to understand human learning and that all other objectives depend on achieving this understanding James Zull challenges the reader to focus on this purpose first for her or himself and then for those for whose learning they are responsible The book is addressed to all learners and educators to the reader as self educator embarked on the journey of lifelong learning to the reader as parent and to readers who are educators in schools or university settings as well as mentors and trainers in the workplace In this work James Zull presents cognitive development as a journey taken by the brain from an organ of organized cells blood vessels and chemicals at birth through its shaping by experience and environment into potentially to the most powerful and exquisite force in the universe the human mind Zull begins his journey with sensory motor learning and how that leads to discovery and discovery to emotion He then describes how deeper learning develops how symbolic systems such as language and numbers emerge as tools for thought how memory builds a knowledge base and how memory is then used to create ideas and solve problems Along the way he prompts us to think of new ways to shape educational experiences from early in life through adulthood informed by the insight that metacognition lies at the root of all learning At a time when we can expect to change jobs and careers frequently during our lifetime when technology is changing society at break neck speed and we have instant access to almost infinite information and opinion he argues that self knowledge awareness of how and why we think as we do and the ability to adapt and learn are critical to our survival as individuals and that the transformation of education in the light of all this and what neuroscience can tell us is a key element in future development of healthy and productive societies **The**

Atheist Who Didn't Exist (Fully Revised 10th Anniversary Edition) Andy Bannister, 2025-07-17 Does atheism really explain everything Can reasonable people take Christianity seriously During the early twenty first century New Atheism was busy producing best selling books and plastering adverts on the sides of buses Its loud scepticism is not as popular these days but many of its arguments live on Yet what if some of its common claims like science has buried God and religion is the cause of most wars are not just incorrect but demonstrably wrong What if Richard Dawkins and the other New Atheists were not merely barking up the wrong tree but were in the wrong forest entirely Andy Bannister brings you this fully updated and revised book with new chapters new resources and new comedy *The Atheist Who Didn't Exist* is designed for curious people to tug at the loose threads of atheism and see if it unravels **The Powers Metaphysic** Neil E. Williams, 2019-09-12

Systematic metaphysics is defined by its task of solving metaphysical problems through the repeated application of single

fundamental ontology The dominant contemporary metaphysic is that of neo Humeanism built on a static ontology typified by its rejection of basic causal and modal features This book offers a radically distinct metaphysic one that turns the status quo on its head Starting with a foundational ontology of inherently causal properties known as powers Neil E Williams develops a metaphysic that appeals to powers in explanations of causation persistence laws and modality Powers are properties that have their causal natures internal to them they are responsible for the effects in the world A unique account of powers is advanced one that understands this internal nature in terms of blueprint of potential interaction types After the presentation of the powers ontology Williams offers solutions to broad metaphysical puzzles some of which take on different forms in light of the new tools that are available The defence of the ontology comes from the virtues of metaphysic it can be used to develop Particular attention is paid to the problems of causation and persistence simultaneously solving them as is casts them in a new light The resultant powers metaphysic is offered as a systematic alternative to neo Humeanism

What's Wrong With Microphysicalism? Andreas Huttemann, 2004-08-02 Microphysicalism the view that whole objects behave the way they do in virtue of the behaviour of their constituent parts is an influential contemporary view with a long philosophical and scientific heritage In *What's Wrong With Microphysicalism* Andreas Huttemann offers a fresh challenge to this view Huttemann agrees with the microphysicalists that we can explain compound systems by explaining their parts but claims that this does not entail a fundamentalism that gives hegemony to the micro level At most it shows that there is a relationship of determination between parts and wholes but there is no justification for taking this relationship to be asymmetrical rather than one of mutual dependence Huttemann argues that if this is the case then microphysicalists have no right to claim that the micro level is the ultimate agent neither the parts nor the whole have ontological priority Huttemann advocates a pragmatic pluralism allowing for different ways to describe nature *What's Wrong With Microphysicalism* is a convincing and original contribution to central issues in contemporary philosophy of mind philosophy of science and metaphysics
