The Onlife Manifesto Being Human In A Hyperconnected Era:

The Onlife Manifesto Luciano Floridi, 2014-11-16 What is the impact of information and communication technologies ICTs on the human condition In order to address this question in 2012 the European Commission organized a research project entitled The Onlife Initiative concept reengineering for rethinking societal concerns in the digital transition This volume collects the work of the Onlife Initiative It explores how the development and widespread use of ICTs have a radical impact on the human condition ICTs are not mere tools but rather social forces that are increasingly affecting our self conception who we are our mutual interactions how we socialise our conception of reality our metaphysics and our interactions with reality our agency In each case ICTs have a huge ethical legal and political significance yet one with which we have begun to come to terms only recently The impact exercised by ICTs is due to at least four major transformations the blurring of the distinction between reality and virtuality the blurring of the distinction between human machine and nature the reversal from information scarcity to information abundance and the shift from the primacy of stand alone things properties and binary relations to the primacy of interactions processes and networks Such transformations are testing the foundations of our conceptual frameworks Our current conceptual toolbox is no longer fitted to address new ICT related challenges This is not only a problem in itself It is also a risk because the lack of a clear understanding of our present time may easily lead to negative projections about the future The goal of The Manifesto and of the whole book that contextualises is therefore that of contributing to the update of our philosophy It is a constructive goal The book is meant to be a positive contribution to rethinking the philosophy on which policies are built in a hyperconnected world so that we may have a better chance of understanding our ICT related problems and solving them satisfactorily The Manifesto launches an open debate on the impacts of ICTs on public spaces politics and societal expectations toward policymaking in the Digital Agenda for Europe s remit More broadly it helps start a reflection on the way in which a hyperconnected world calls for rethinking the referential frameworks on which policies are built *The Onlife Manifesto* Luciano Floridi, 2014-12-31

, 2023-08-28 This book uses case analyses and industry insights and blends them with forays into philosophy and ethics to conceptualise the mismatch between human values and the values inherent in an increasingly technologized world Bringing together contributors from the disciplines of law politics philosophy and communication studies this volume develops an interdisciplinary vocabulary for thinking about the questions and antinomies of human technology interaction while also resisting any deceptively straightforward synthesis The topics discussed include the competition over and regulation of

technology the harm induced by autonomous technologies and the place and role of humans in a world that is undergoing rapid and radical change Malleable, Digital, and Posthuman Ignas Kalpokas, 2021-09-10 This book proposes a posthumanist research methodology for future research in the areas of the economy the human self politics and research ethics providing a novel explanatory and methodological framework for studying today's world **Legal Issues in the Digital Economy** Federico Costantini, Anthony Forsyth, 2019-08-01 It is a matter of fact that technological innovation is deeply impacting on our culture society economy and labour market The massive and widespread use of Artificial Intelligence and the strengthening of the collaborative economy also known as gig or platform economy are blurring the traditional legal categories and creating new requirements for protection for employed and self employed workers This book represents a tool to understand where we are and where we are going focusing on old and new legal categories and labour market policies The chapters included in this volume cover different disciplines such as legal informatics labour law social security law civil law and tort law in order to offer scholars and legal specialists an overall view of ongoing changes challenges and opportunities from a European Union law perspective *The Digital Citizenship in the European Union framework. developments that had already generated the strong ideas of social personhood inherent in the ideal types of the gentleman the manager and Homo digitalis Subjectivity Transformed is a major contribution to legal and social theory and with its original analysis of the formation of modern subjectivity it will be of interest to students and scholars throughout the social sciences and humanities After the Digital Tornado Kevin Werbach, 2020-07-23 Networks powered by algorithms are pervasive Major contemporary technology trends Internet of Things Big Data Digital Platform Power Blockchain and the Algorithmic Society are manifestations of this phenomenon The internet which once seemed an unambiguous benefit to society is now the basis for invasions of privacy massive concentrations of power and wide scale manipulation The algorithmic networked world poses deep questions about power freedom fairness and human agency The influential 1997 Federal Communications Commission whitepaper Digital Tornado hailed the endless spiral of connectivity that would transform society and today little remains untouched by digital connectivity Yet fundamental questions remain unresolved and even more serious challenges have emerged This important collection which offers a reckoning and a foretelling features leading technology scholars who explain the legal business ethical technical and public policy challenges of building pervasive networks and algorithms for the benefit of humanity This title is also available as Open Access on Cambridge Core
