The Oxford Handbook of Philosophy in Early Modern Europe Desmond M. Clarke, Catherine Wilson, 2013-05-23 In this Handbook twenty six leading scholars survey the development of philosophy between the middle of the sixteenth century and the early eighteenth century The five parts of the book cover metaphysics and natural philosophy the mind the passions and aesthetics epistemology logic mathematics and language ethics and political philosophy and religion The period between the publication

of Copernicus's *De Revolutionibus* and Berkeley's reflections on Newton and Locke saw one of the most fundamental changes in the history of our way of thinking about the universe. This radical transformation of worldview was partly a response to what we now call the Scientific Revolution; it was equally a reflection of political changes that were no less fundamental, which included the establishment of nation states and some of the first attempts to formulate a theory of international rights and justice. Finally, the Reformation and its aftermath undermined the apparent unity of the Christian church in Europe and challenged both religious beliefs that had been accepted for centuries and the interpretation of the Bible on which they had been based. The Handbook surveys a number of the most important developments in the philosophy of the period as these are expounded both in texts that have since become very familiar and in other philosophical texts that are undeservedly less well known. It also reaches beyond the philosophy to make evident the fluidity of the boundary with science and to consider the impact on philosophy of historical and political events, explorations, revolutions, and reforms, inventions and discoveries. Thus it not only offers a guide to the most important areas of recent research but also offers some new questions for historians of philosophy to pursue and to have indicated areas that are ripe for further exploration.

Handbook for the Historiography of Science Mauro L. Condé, Marlon Salomon, 2023-09-30. This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty-first century. It presents its main authors, concepts, ideas, conceptions, and schools. It also analyzes the historical circumstances of the rise of the discipline, history of science, and the relations of the historiography of science with related areas. These chapters do not understand the historiography of science as a mere description or record of the history of science. Instead, they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts. In other words, more than describing the record of the various possibilities of historiographical approaches to science, the chapters carry out an epistemological reflection to assess the bases, possibilities, scope, and limits of different historiographical conceptions, authors, and traditions that have established the writing of the history of science. This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science, be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science.
