Method of Fundamental Solutions in Poroelasticity to Model the Stress Field in Geothermal Reservoirs Matthias Albert Augustin,2015-07-15 This monograph focuses on the numerical methods needed in the context of developing a reliable simulation tool to promote the use of renewable energy One very promising source of energy is the heat stored in the Earth s crust which is harnessed by so called geothermal facilities Scientists from fields like geology geo engineering geophysics and especially geomathematics are called upon to help make geothermics a reliable and safe energy production method One of the challenges they face involves modeling the mechanical stresses at work in a reservoir The aim of this thesis is to develop a numerical solution scheme by means of which the fluid pressure and rock stresses in a geothermal reservoir can be determined prior to well drilling and during production For this purpose the method should i include poroelastic effects ii provide a means of including thermoelastic effects iii be inexpensive in terms of memory and computational power and iv be flexible with regard to the locations of data points After introducing the basic equations and their relations to more familiar ones the heat equation Stokes equations Cauchy Navier equation the method of fundamental solutions and its potential value concerning our task are discussed Based on the properties of the fundamental solutions theoretical results are established and numerical examples of stress field simulations are presented to assess the method s performance The first ever 3D graphics calculated for these topics which neither requiring meshing of the domain nor involving a time stepping scheme make this a pioneering volume

Mathematics Catalog 2005 Neil Thomson,2004-10 **Scientific Computing** John A. Trangenstein,2018-05-14 This is the first of three volumes providing a comprehensive presentation of the fundamentals of scientific computing This volume discusses basic principles of computation and fundamental numerical algorithms that will

contributed papers presented at the NATO Advanced Research Workshop on Real Time Integration Methods For Mechanical System Simulation held in Snowbird Utah August 7 11 1989 The Institute was attended by 42 participants from 9 countries including leading mathematicians and engineers from universities research institutions and industry The majority of participants presented either invited or contributed papers during the Institute and everyone participated in lively discussions on scientific aspects of the program The Workshop provided a forum for investigation of promising new directions for solution of differential algebraic equations DAE of mechanical system dynamics by mathematicians and engineers from numerous schools of thought The Workshop addressed needs and opportunities for new methods of solving of DAE of mechanical system dynamics from the perspective of a broad range of engineering and scientific applications Among the most exciting new applications addressed was real time computer simulation of mechanical systems that for the first time in human history permits operator in the loop simulation of equipment that is controlled by the human e g driving a vehicle operating a space telerobot operating a remote manipulator and operating construction equipment The enormous potential value of this new application and the fact that real time numerical integration methods for DAE of mechanical system dynamics is the pacing problem to be solved in realizing this potential served to focus much of the discussion at the Workshop

Management and Office Information Systems Shi-Kuo Chang, 2012-12-06 Decision making is a very complex phenomenon Modern decision makers must deal with very complex problems which are constantly changing and often ill structured making modeling and analysis difficult In order to provide support for the decision makers computer based information systems are designed to collect store process and transport information Recent advances in computer technology data communications database systems office automation and knowledge engineering have made possible the design of very sophisticated information systems However rapid technological advances also create many problems not the least of which is the lack of integration among the various disciplines in information system design Without such integration a costly computer based information system is at best partially useful and at worst totally useless The aim of this book therefore is to examine the various issues involved in designing management information systems decision support systems and office information systems for increasing productivity and providing decision support This book is the outcome of the Workshop on Management and Office Information Systems which was organized by the Knowledge Systems Institute and held at Chicago Illinois from June 28 to 30 1982 Twenty seven papers from the working papers presented at that workshop were selected for inclusion in the present volume which is organized into five parts I organization structures and management II decision support systems III database systems IV office information systems and V systems and applications
