

What are neural networks

- Neural networks use many nodes (neurons) connected by edges (axons, dendrites) to transform an input into a desired output
- The neurons and their edges are adjusted, frequently using gradual changes to *train* the neural network.
- Neural networks can be trained many ways
 - Actor / Critic Learning
 - external reinforcement
 - Hebbian Learning (association)
 - Internal reinforcement
 - Linear Algebra (closed form solution)
- We tend to use gradient descent like learning to make incremental changes over time.
- We can introduce Boltzmann like mechanisms in some networks

Neural Network Design (2nd Edition) Martin Hagan, Howard Demuth, Mark Beale, Orlando De Jesus, 2014-09-01 This book provides a clear and detailed coverage of fundamental neural network architectures and learning rules. In it, the authors emphasize a coherent presentation of the principal neural networks methods for training them and their applications to practical problems. Neural Network Design W/cd Hagan Martin T. Et. Al, 2009 **A First Course in Machine Learning**

- Solutions Manual Taylor & Francis Group, 2011-10-24 **Neural Networks and Deep Learning** Charu C. Aggarwal, 2018-08-25 This book covers both classical and modern models in deep learning. The primary focus is on the theory and algorithms of deep learning. The theory and algorithms of neural networks are particularly important for understanding important concepts so that one can understand the important design concepts of neural architectures in different applications. Why do neural networks work? When do they work better than off the shelf machine learning models? When is depth useful? Why is training neural networks so hard? What are the pitfalls? The book is also rich in discussing different applications in order to give the practitioner a flavor of how neural architectures are designed for different types of problems. Applications associated with many different areas like recommender systems, machine translation, image captioning, image classification, reinforcement learning, based gaming, and text analytics are covered. The chapters of this book span three categories: The basics of neural networks. Many traditional machine learning models can be understood as special cases of neural networks. An emphasis is placed in the first two chapters on understanding the relationship between traditional machine learning and neural networks. Support vector machines, linear logistic regression, singular value decomposition, matrix factorization, and recommender systems are shown to be special cases of neural networks. These methods are studied together with recent feature engineering methods like word2vec. Fundamentals of neural networks. A detailed discussion of training and regularization is provided in Chapters 3 and 4. Chapters 5 and 6 present radial basis function (RBF) networks and restricted Boltzmann machines. Advanced topics in neural networks. Chapters 7 and 8 discuss recurrent neural networks and convolutional neural networks. Several advanced topics like deep reinforcement learning, neural Turing machines, Kohonen self-organizing maps, and generative adversarial networks are introduced in Chapters 9 and 10. The book is written for graduate students, researchers, and practitioners. Numerous exercises are available along with a solution manual to aid in classroom teaching. Where possible, an application-centric view is highlighted in order to provide an understanding of the practical uses of each class of techniques.
