Pavement Analysis and Design Yang Hsien Huang, 1993. This text software package explores the structural analysis and design of highway pavements focusing on the mechanistic/empirical design procedures rather than the purely empirical methods. It presents the theory of pavement design and reviews the methods developed by several organizations such as the AASHTO, the AI, and the PCA. It includes the KENLAYER program for flexible pavements applicable to a multilayered system under stationary or moving multiple wheel loads with each layer being either linear elastic, nonlinear elastic, or viscoelastic. It contains the KENSLABS program for rigid

pavements applicable to multiple slabs fully or partially supported on a liquid solid or layered foundation with moment or shear transfer across the joints presents most of the advanced theory and detailed information in appendices features a large number of examples and line drawings *Recent Advances in Civil Engineering* Lakshman Nandagiri, M. C.

Narasimhan, Shriram Marathe, 2022-06-26 This book presents the select proceedings of the International Conference on Civil Engineering Trends and Challenges for Sustainability CTCS 2021 It discusses emerging and latest research and advances in sustainability in different areas of civil engineering providing solutions to sustainable development Various topics covered include sustainable construction technology structural engineering transportation and traffic engineering geotechnical engineering environmental engineering water resources engineering remote sensing and GIS applications This book will be of potential interest to researchers and professionals working in sustainable civil engineering and related fields

**Aircraft/pavement Technology** Frank V. Hermann, 1997 **Manual of Current Practice for the Design, Construction, and Maintenance of Soil-aggregate Roads** Eugene Yuching Huang, North Carolina State College. Department of Engineering Research, 1959 **Effects of Dowel Misalignments on Concrete Pavement Joint Opening Behavior** Milind Laxman Prabhu, 2007 [A Surface Performance-graded \(SPG\) Specification for Surface Treatment Binders](#) Lubinda F. Walubita, 2005 Presently surface treatment design and material selection is based on traditional specifications and experience which are not performance based and sometimes result in inadequate performance of the surface treatment In 2000 the first phase of a Texas Department of Transportation TxDOT research project developed a surface performance graded SPG specification for the selection of surface treatment binders Research Report 1710 1 The SPG specification is performance based and utilizes binder properties directly related to surface treatment performance and associated distress The specification takes into account environmental conditions aging effects of the binder visco elastic behavior and reliability The objective of this second phase of the project was to investigate and establish the validity and applicability of the

proposed SPG specification make modifications where necessary and finally recommend the SPG specification for practical implementation. The research methodology involved highway section identification, laboratory testing including SPG grading, performance monitoring and comparison of the SPG binder grades to actual field performance. Factors included in the experimental design were binder type and suppliers, environment, aggregates and traffic. Analyses of the results showed that there is generally a good correlation between the proposed SPG specification and actual field performance. Overall, the results are indicative that the SPG specification is functional and if properly applied, the specification promises to be a relatively cost effective method for selecting binders to ensure adequate surface treatment performance. However, further validation is recommended, possibly with controlled test sections, to fully investigate the effects of design, construction and quality control processes and address some of the deficiencies of the specification.

**Precast Concrete Raft Units** J.W. Bull, 2012-12-06

The use of precast concrete is a well established construction technique for beams, floors, panels, piles, walls and other structural elements. The advantages of precasting include excellent quality control, economical large scale production, improved construction productivity especially in adverse weather conditions and immediate structure availability. These advantages have been recognized for precast concrete raft pavement units since their introduction in the 1930s. In the last ten years, there has been a considerable increase in the use of raft units especially in their range of applications, their analysis and their design. However, the description of these developments has been published in academic journals and conference proceedings which are not readily available to practising raft unit pavement design engineers. Pavement design engineers are under increasing pressure to produce raft unit designs that are inexpensive, long lasting and able to allow reorganization to accommodate changing use and uncertainty of future loading requirements. This is the first book devoted to raft unit pavements and will become a standard work of reference.
