Environments Pascal Bouvry, Horacio González-Vélez, Joanna Kołodziej, 2011-06-19 One of the most challenging issues for the intelligent decision systems is to effectively manage the large scale complex distributed environments such as computational clouds grids ad hoc and P2P networks under the different types of users their relations and real world uncertainties In this context the IT resources and services usually belong to different owners institutions enterprises or individuals and are managed by different administrators These administrators conform to different sets of rules and configuration directives and can impose different usage policies on the system users Additionally uncertainties are presented in various types of information that are incomplete imprecise fragmentary or overloading which hinders the full and precise determination of the evaluation criteria their subsequent and selection the assignment scores and eventually the final integrated decision result This book presents new ideas analysis implementations and evaluation of the next generation intelligent techniques for solving complex decision problems in large scale distributed systems In 15 chapters several important formulations of the decision problems in heterogeneous environments are identified and a review of the recent approaches from game theoretical models and computational intelligent techniques such as genetic memetic and evolutionary algorithms to intelligent multi agent systems and networking are presented We believe that this volume will serve as a reference for the students researchers and industry practitioners working in or are interested in joining interdisciplinary works in the areas of intelligent decision systems using emergent distributed computing paradigms It will also allow newcomers to grasp key concerns and potential solutions on the selected topics
