be short and or observed irregularly Real data applications and further results are presented throughout by means of chapter problems and complements Notably the book covers Important recent developments in Kalman filtering dynamic GLMs and state space modeling Associated computational issues such as Markov chain Monte Carlo and the EM algorithm Prediction and interpolation Stationary processes

Statistical Group Comparison Tim Futing Liao, 2011-09-20 An incomparably useful examination of statistical methods for comparison The nature of doing science be it natural or social inevitably calls for comparison Statistical methods are at the heart of such comparison for they not only help us gain understanding of the world around us but often define how our research is to be carried out The need to compare between groups is best exemplified by experiments which have clearly defined statistical methods However true experiments are not always possible What complicates the matter more is a great deal of diversity in factors that are not independent of the outcome Statistical Group Comparison brings together a broad range of statistical methods for comparison developed over recent years The book covers a wide spectrum of topics from the simplest comparison of two means or rates to more recently developed statistics including double generalized linear models and Bayesian as well as hierarchical methods Coverage includes Testing parameter equality in linear regression and other generalized linear models GLMs in order of increasing complexity Likelihood ratio Wald and Lagrange multiplier statistics examined where applicable Group comparisons involving latent variables in structural equation modeling Models of comparison for categorical latent variables Examples are drawn from the social political economic and biomedical sciences many can be implemented using widely available software Because of the range and the generality of the statistical methods covered researchers across many disciplines beyond the social political economic and biomedical sciences will find the book a convenient reference for many a research situation where comparisons may come naturally
