Sustainable Food Systems Robert Biel, 2016-12-05 Faced with a global threat to food security it is perfectly possible that society will respond not by a dystopian disintegration but rather by reasserting co operative traditions This book by a leading expert in urban agriculture offers a genuine solution to today s global food crisis By contributing more to feeding themselves cities can allow breathing space for the rural sector to convert to more organic sustainable approaches Biel s approach connects with current debates about agroecology and food sovereignty asks key questions and proposes lines of future research He suggests that today s food insecurity manifested in a regime of wildly fluctuating prices reflects not just temporary stresses in the existing mode of production but more profoundly the troubled process of generating a new one He argues that the solution cannot be implemented at a merely technical or political level the force of change can only be driven by the kind of social movements which are now daring to challenge the existing unsustainable order Drawing on both his academic research and teaching and 15 years experience as a practicing urban farmer Biel brings a unique interdisciplinary approach to this key global issue creating a dialogue between the physical and social sciences

Sterilization of Food in Retort Pouches A.G. Abdul Ghani Al-Baali, Mohammed M. Farid, 2007-11-12 Sterilization of canned food is a well known technology that has been in practice for many decades Food sterilization has been well studied in a large number of textbooks This book is not about the science of sterilization or food safety but rather about the important interaction between uid mechanics heat transfer and microbial inactivation Such interaction is complex and if ignored would lead to incorrect information not only on food sterility but also on food quality The book is written by engineers for both food engineers and scientists However it may also be of interest to those working in computational uid dynamics CFD It presents an elementary treatment of the principles of heat transfer during thermal sterilization and it contains sufficient material presented at a high level of mathematics A background in the solution of ordinary and partial differential equations is helpful for proper understanding of the main chapters of this book However we have avoided going into a detailed numerical analysis of the finite volume method FVM of solutions used to solve the sets of equations Some familiarity with uid dynamics and heat transfer will also be helpful but not essential In this book conduction and convective heat transfer is treated such that the reader is offered the insight that is gained from analytical solutions as well as the important tools of numerical analysis which must be used in practice Analysis of free convection is used to present a physical picture of the convection process

Law and Neuroscience: Justice as a Challenge for Neurorights, Neurolaw, and Forensic Psychology Eric García-López, Eduardo Demetrio Crespo, Cristina Nombela Otero, Federica Coppola, 2025-05-29 Justice is one of the most complex issues in the study of Law. Philosophical, sociological, and religious studies have attempted to articulate this value central to human coexistence throughout history. More recently, specialised sub-disciplines such as Legal Psychology have significantly contributed to refining the relationship between Law and Justice by enriching the study of these normative domains with empirical knowledge about social interactions. In more recent developments, the discipline of Neurolaw has begun to offer new insights into the analysis of the longstanding and disputed issues surrounding Law and Justice. Neurolaw can be defined as the analysis of Law and Justice from the perspective of Neuroscience and involves an understanding of human behavior through the study of the brain's interactions with the environment. Neuroscience appears to provide a more up-to-date understanding of human behavior focussing on the legal and forensic implications. Yet, neuroscientific studies of crime fail to grasp the impact of broader socio-contextual contingencies on human conduct, including institutional failures, gender dynamics, and cultural power. Such a failure evidences the limits of neuroscience as a complete epistemological tool. It is too narrow to provide a complete understanding of complex human conduct like crime, as it involves a careful examination of the variegated interactions between various social and biological levels. This Research Topic addresses the need for developing a holistic theoretical framework that considers not only the biological nature of human beings but also the social, cultural, and political influences on human behavior. Such a holistic approach is necessary to clarify some foundational philosophical questions, including subjectivity and consciousness, as well as the role that these concepts play within the notion of criminal liability and punishment. In addition to these unresolved philosophical questions, there is also the need for a revised legal and forensic approach that grasps a more nuanced and complex understanding of human conduct. Topics for contributions include but are not limited to the following: Neuroscience Law and Criminal Justice, Neuroscience Law and Social Justice, Neuroscience Law and Racial Justice, Neuroscience and Restorative Justice, Neurorights, Neuroethics, Criminal responsibility, Decision making, Juvenile Criminal Law and Punishment, Free will, Ethical, legal, and social repercussions of the neurotechnologies currently available, as well as of those that are currently being developed. We welcome submissions from authors with backgrounds in law, justice, philosophy, forensic neuropsychology, forensic cognitive social psychology, forensic psychiatry, criminology, sociology, addressing theoretical, methodological, or empirical issues related to these topics and other related ones. Cross-inter and multidisciplinary contributions are of course welcome. LCA and TEA for Sustainable Development Avinash Kumar Agarwal, Srijit Biswas, 2025-10-09 This book includes several special features related to Life Cycle and Techno Economic Assessment (LCA and TEA) to enhance clarity, understanding, and engagement. It incorporates numerous diagrams, flowcharts, and infographics to visualize complex concepts and methodologies for assessing life cycle energy emissions, resource depletion, and the techno-economic impact on society. Key data comparisons and results are

summarized in tables and matrices for easy reference. Additionally, the book presents real world LCA case studies and scenarios to illustrate practical applications and lessons learned. Interactive elements such as thought provoking questions, exercises, and discussion points encourage active learning. A clear step by step presentation of LCA and TEA methodologies is provided, followed by in depth analyses and discussions. These features make the book an accessible, user friendly, and engaging resource for readers from diverse backgrounds and expertise levels. The primary benefit of this book is a comprehensive understanding of the environmental and economic implications of various technologies, processes, and products. Readers will gain in depth knowledge of LCA and TEA methodologies and their applications, learning how to evaluate and compare the sustainability and feasibility of different options. They will also gain insights into potential environmental and economic impacts and receive guidance on integrating LCA and TEA into decision making processes. With access to case studies and real world examples illustrating best practices, this book equips readers to make informed decisions, develop more sustainable solutions, and contribute to an environmentally conscious and economically viable future.

Crude Oil Fouling Francesco Coletti, Geoffrey Hewitt, 2014-11-20. With production from unconventional rigs continuing to escalate and refineries grappling with the challenges of shale and heavier oil feedstocks, petroleum engineers and refinery managers must ensure that equipment used with today's crude oil is protected from fouling deposits. *Crude Oil Fouling* addresses this overarching challenge for the petroleum community with clear explanations on what causes fouling, current models, and new approaches to evaluate and study the formation of deposits and how today's models could be applied from lab experiment to onsite field usability for not just the refinery but for the rig platform or pipeline. *Crude Oil Fouling* is a must have reference for every petroleum engineer's library that gives the basic framework needed to analyze, model, and integrate the best fouling strategies and operations for crude oil systems. Defines the most critical variables and events that cause fouling. Explains the consequences of fouling and its impact on operations, safety, and economics. Provides the technical models available to better predict and eliminate the potential for fouling in any crude system. **The future of psychology: Approaches to enhance therapeutic outcomes** Peta Stapleton, Oliver Baumann, Dawson Church, 2023-01-30
