Section 1.1

1. Individuals are people or objects included in the study, while a variable is a characteristic of the individual that is measured or observed.
2. Nominal data are always qualitative.
3. A parameter is a numerical measure that describes a population. A statistic is a numerical value that describes a sample.
4. If the population does not change, the values of the parameters will not change. Thus, for a fixed population, parameter values are constant. If we take three samples of the same size from a population, the values of the sample statistics will almost surely differ.
5. (a) These numerical assignments are at the nominal level. There is no apparent ordering in the responses.
(b) These numerical assignments are at the ordinal level. There is an increasing relationship from worst to best levels of service. These assignments are not at the interval or ratio level. The distances between numerical responses are not meaningful. The ratios are also not meaningful.
6. Lucy's observations do not apply to all adults; they apply only to her friends. Since the sample is not random, we cannot draw any conclusions about a larger group using this data.
7. (a) Meal ordered at fast-food restaurants.
(b) Qualitative
(c) All U.S. adult fast-food consumers.
8. (a) Miles per gallon.
(b) Quantitative.
(c) All new small hybrid cars.
9. (a) Nitrogen concentration (milligrams of nitrogen per liter of water).
(b) Quantitative.
(c) Nitrogen concentration (milligrams of nitrogen per liter of water) in the entire lake.

Understanding Statistics in the Behavioral Sciences Roger Bakeman, Byron F. Robinson, 2005-03-23 Understanding Statistics in the Behavioral Sciences is designed to help readers understand research reports analyze data and familiarize themselves with the conceptual underpinnings of statistical analyses used in behavioral science literature The authors review statistics in a way that is intended to reduce anxiety for students who feel intimidated by statistics Conceptual underpinnings and practical applications are stressed whereas algebraic derivations and complex formulas are reduced New ideas are presented in the context of a few recurring examples which allows readers to focus more on the new statistical concepts than on the details of different studies The authors selection and organization of topics is slightly different from the ordinary introductory textbook It is motivated by the needs of a behavioral science student or someone in clinical practice rather than by formal mathematical properties The book begins with hypothesis testing and then considers how hypothesis testing is used in conjunction with statistical designs and tests to answer research questions In addition this book treats analysis of variance as another application of multiple regression With this integrated unified approach students simultaneously learn about multiple regression and how to analyze data associated with basic analysis of variance and covariance designs Students confront fewer topics but those they do encounter possess considerable more power generality and practical importance This integrated approach helps to simplify topics that often cause confusion Understanding Statistics in the Behavioral Sciences features Computer based exercises many of which rely on spreadsheets help the reader perform statistical analyses and compare and verify the results using either SPSS or SAS These exercises also provide an opportunity to explore definitional formulas by altering raw data or terms within a formula and immediately see the consequences thus providing a deeper understanding of the basic concepts Key terms and symbols are boxed when first introduced and repeated in a glossary to make them easier to find at review time Numerous tables and graphs including spreadsheet printouts and figures help students visualize the most critical concepts This book is intended as a text for introductory behavioral science statistics It will appeal to instructors who want a relatively brief text The book s active approach to learning works well both in the classroom and for individual self study *Understanding Statistics for the Social Sciences, Criminal Justice, and Criminology* Jeffery T.
