Lasso-MPC - Predictive Control with l1-Regularised Least Squares Marco

Gallieri,2016-03-31 This thesis proposes a novel Model Predictive Control MPC strategy which modifies the usual MPC cost function in order to achieve a desirable sparse actuation It features an l1 regularised least squares loss function in which the control error variance competes with the sum of input channels magnitude or slew rate over the whole horizon length While standard control techniques lead to continuous movements of all actuators this approach enables a selected subset of actuators to be used the others being brought into play in exceptional circumstances The same approach can also be used to obtain asynchronous actuator interventions so that control actions are only taken in response to large disturbances This thesis presents a straightforward and systematic approach to achieving these practical properties which are ignored by mainstream control theory **Adaptive Filtering** Paulo S. R. Diniz,2019-11-28 In the fifth edition of this textbook author

Paulo S R Diniz presents updated text on the basic concepts of adaptive signal processing and adaptive filtering He first introduces the main classes of adaptive filtering algorithms in a unified framework using clear notations that facilitate actual implementation Algorithms are described in tables which are detailed enough to allow the reader to verify the covered concepts Examples address up to date problems drawn from actual applications Several chapters are expanded and a new chapter Kalman Filtering is included The book provides a concise background on adaptive filtering including the family of LMS affine projection RLS set membership algorithms and Kalman filters as well as nonlinear sub band blind IIR adaptive filtering and more Problems are included at the end of chapters A MATLAB package is provided so the reader can solve new problems and test algorithms The book also offers easy access to working algorithms for practicing engineers *Scientific and Technical Aerospace Reports* ,1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database

Bush,2014-01-13 This book bridges the divide between the fields of power systems engineering and computer communication through the new field of power system information theory Written by an expert with vast experience in the field this book explores the smart grid from generation to consumption both as it is planned today and how it will evolve tomorrow The book focuses upon what differentiates the smart grid from the traditional power grid as it has been known for the last century Furthermore the author provides the reader with a fundamental understanding of both power systems and communication networking It shows the complexity and operational requirements

of the evolving power grid the so called smart grid to the communication networking engineer and similarly it shows the complexity and operational requirements for communications to the power systems engineer The book is divided into three parts Part One discusses the basic operation of the electric power grid covering fundamental knowledge that is assumed in Parts Two and Three Part Two introduces communications and networking which are critical enablers for the smart grid It also considers how communication and networking will evolve as technology develops This lays the foundation for Part Three which utilizes communication within the power grid Part Three draws heavily upon both the embedded intelligence within the power grid and current research anticipating how and where computational intelligence will be implemented within the smart grid Each part is divided into chapters and each chapter has a set of questions useful for exercising the readers understanding of the material in that chapter

Key Features Bridges the gap between power systems and communications experts Addresses the smart grid from generation to consumption both as it is planned today and how it will likely evolve tomorrow Explores the smart grid from the perspective of traditional power systems as well as from communications Discusses power systems communications and machine learning that all define the smart grid It introduces the new field of power system information theory
