

Silent Sound Technology

Abstract

Silent Sound Technology for mandarin is a non-speech interaction embedded engine with a variety of lip movement and facial expression interactive service platform based on cloud computing. This technology helps people to communicate in noisy places and to reduce noise pollution to some extent. If we don't communicate...!! As a result of being unable to communicate is a withdrawal from many of the social activities. An attempt is made to develop a mobile terminal oriented integration of a variety of interactive way emotional speech interaction system just to put an end for embarrassing situation like when a person need to convey that "I can't talk to you right now" or apologetically rushing out of the place along with the device to answer and so on.. A high resolution camera is used to capture the video of human silent speech and is morphologically segmented for noise. From the binary image frames the lip montage is built to generate a threshold value for every word in sequence and a database is created for all known templates. After the threshold test pass, other facial parts like eyes with eye brows and nose are mapped with the data base contents to obtain emotional expression and finally, user can receive text messages in sequence as well as audio output. Initial results obtained are discussed in this paper.

Transmedium Garrett Stewart,2018-01-26 If you attend a contemporary art exhibition today you re unlikely to see much traditional painting or sculpture Indeed artists today are preoccupied with what happens when you leave behind assumptions about particular media such as painting or woodcuts and instead focus on collisions between them and the new forms and ideas that those collisions generate Garrett Stewart in *Transmedium* dubs this new approach Conceptualism 2.0 an allusion in part to the computer images that are so often addressed by these works A successor to 1960s Conceptualism which posited that a material medium was unnecessary to the making of art Conceptualism 2.0 features artworks that are transmedial that place the aesthetic experience itself deliberately at the boundary between often incommensurable media The result Stewart shows is art whose forced convergences break open new possibilities that are wholly surprising intellectually enlightening and often uncanny *Haptic and Audio Interaction Design* M.
