Manual for monitoring insecticide resistance in mosquito vectors and selecting appropriate interventions World Health Organization, 2022-06-22 Vector borne diseases are major causes of sickness disability and death worldwide These diseases are caused by parasites bacteria or viruses transmitted by various vectors including mosquitoes sandflies fleas ticks lice and others Insecticides form an essential part of vector control the most widely used and effective strategy to reduce the burden of these diseases Knowledge of vector resistance to insecticides is therefore crucial for the selection of effective vector control interventions This document provides guidance on how to assess insecticide resistance in mosquito vectors and is aimed at field entomologists and biologists within ministries of health or partner institutions It is also directed at programme managers and others in charge of designing and implementing vector control strategies who need to draw on resistance data to inform their decisions Lastly it can help researchers and the pesticide industry to assess in a standardized way vector resistance to compounds used in existing and new vector control products It supersedes the Test procedures for insecticide resistance monitoring in malaria vector mosquitoes 2nd ed published in 2016

Introduction to

Matrices and Vectors Jacob T. Schwartz, 2012-05-23 Realizing that matrices can be a confusing topic for the beginner the author of this undergraduate text has made things as clear as possible by focusing on problem solving rather than elaborate proofs He begins with the basics offering students a solid foundation for the later chapters on using special matrices to solve problems The first three chapters present the basics of matrices including addition multiplication and division and give solid practice in the areas of matrix manipulation where the laws of algebra do not apply In later chapters the author introduces vectors and shows how to use vectors and matrices to solve systems of linear equations He also covers special matrices including complex numbers quaternion matrices and matrices with complex entries and transpose matrices the trace of a matrix the cross product of matrices eigenvalues and eigenvectors and infinite series of matrices Exercises at the end of each section give students further practice in problem solving Prerequisites include a background in algebra and in the later chapters a knowledge of solid geometry The book was designed as an introductory text for college freshmen and sophomores but selected chapters can also be used to supplement advanced high school classes Professionals who need a better understanding or review of the subject will also benefit from this concise guide

Hausdorff Spectra in Functional Analysis Eugeniy Smirnov, 2002-08-09 Self contained and collating for the first time material that has until now only been published in journals often in Russian this book will be of interest to functional analysts especially those with interests in topological vector spaces and to algebraists concerned with category theory The closed graph theorem is one of the corner stones of functional analysis both as a tool for applications and as an object for research However some of the spaces which arise in applications and for which one wants closed graph theorems are not of the type covered by the classical closed graph theorem of Banach or its immediate extensions To remedy this mathematicians such as Schwartz and De Wilde in the West and Rajkov in the East have introduced new ideas which have allowed them to establish closed graph theorems suitable for some of the desired applications In this book Professor Smirnov uses category theory to provide a very general framework including the situations discussed by De Wilde Rajkov and others General properties of the spaces involved are discussed and applications are provided in measure theory global analysis and differential equations

Advances in Disease Vector Research , 2012-12-06 Entomology plant pathology and virology are a few of the disciplines covered by this well reviewed series It also covers the spectrum of vectors from mosquitos and leafhoppers to nematodes and pathogens from viruses to mycoplasmas to protozoa Articles deal with the emerging science of vector ecology and consider both biotic and abiotic environmental influences on disease transmission As a forum to present current thinking in this field the series is an important resource for researchers and students involved in understanding and overcoming the many vector borne diseases of plants animals and humans
