TrueAlert Addressable Operation Features

Each individually addressed notification appliance receives power and control over a single wire pair providing:

- Supervised wiring connections to each appliance that support using "T-tapped" wiring for Class B circuits (Class A circuits require in/out wiring)
- Horns sounding with selectable high or low output, as Temporal 3 or March Time pattern (60 or 120 bpm), or Steady On, controlled separately from visible appliances on the same two-wire circuit
- Visible appliances operating synchronized at 1 Hz
- Control over power limited, isolated output Signaling Line Circuits (SLCs) with up to 63 addressable appliances per SLC, and up to 189 appliances per control source (refer to page 7 for detailed SLC ratings)
- Control sources selectable to provide individual appliance magnetic test mode and appliance LED polling indicator
- 4100ES, 4100U and 4010ES systems also provide additional control capabilities using Virtual NAC (VNAC) appliance groupings across SLCs and across control sources

Class B, "T-tapped" wiring advantages:

- Less wiring distance is required since traditional end-of-line Class B wiring supervision is not needed
- With less wiring distance required, voltage drops can be reduced, allowing more appliances per wire run
