Kahl,2014-11-06 One of the most interesting questions that can be raised about the twentieth century world concerns the degree to which industrialization created a common culture for all peoples Reported here are the results of an empirical investigation designed to produce instruments to measure those personal values that have been central variables in the theory of modernization of societies The purpose of Joseph Kahl s research is primarily methodological to advance the description and measurement of those value orientations used by men to organize their occupational careers It seeks to delineate and measure a set of values that represents a modern view of work and life The working laboratory was Brazil and Mexico two countries undergoing rapid industrialization More than six hundred men in Brazil and more than seven hundred in Mexico responded to questionnaires In addition over twenty five men in each country were asked to sit beside a tape recorder and talk freely of their worldviews The respondents were divided between inhabitants of the cities of Rio de Janeiro and Mexico City and those who lived in provincial towns of fewer than ten thousand inhabitants The samples included manual and nonmanual employees The results showed that the main variable predicting whether or not a man would tend toward modernism was his social class position Middle class men were much more modern in outlook than working class men Residence in a metropolis rather than in a small town also increased modernism though to a lesser extent Differences between Brazil and Mexico and indeed the United States were found to be surprisingly small of considerably less weight than position in the social structure in predicting value orientations The author addresses himself primarily to sociologists and their students who are themselves studying aspects of socio economic development His findings however cannot fail to be of interest and benefit to social scientists of various disciplines and to all who are concerned with the process of development planners at the national and local levels demographers and businesspeople **Cognitive Therapy and Dreams** Arthur Freeman, EdD, ABPP,2003-12-23 Expanded from a special issue of the Journal of Cognitive Psychotherapy this volume contains some of the most interesting and promising work on dreams coming from therapists and researchers working at the crossroads of cognitive therapy and other systems from a reprint of Beck s only article on cognition and dreams to the influence of modern neurobiology on the use of dreams in cognitive therapy These chapters provide a meta theory of dreams that is unique to the cognitive perspective As such they begin the process of generating a comprehensive cognitive model of dream work that includes cognitive affective physical and behavioral features from which future research and clinical innovations can be built **Selected Readings in Nuclear, Biological and Chemical Operations** ,1983 **Many Ways to be Deaf** Leila Frances Monaghan,2003 Table of contents
