The widely studied RP techniques include stereolithography apparatus SLA selective laser sintering SLS three dimensional printing 3DP fused deposition modeling FDM 3D plotting solid ground curing SGC multiphase jet solidification MJS laminated object manufacturing LOM. Different techniques are associated with different materials and/or processing principles and thus are devoted to specific applications. RP technology has no longer been only for prototype building; rather, it has been extended for real industrial manufacturing solutions. Today, the RP technology has contributed to almost all engineering areas that include mechanical, materials, industrial, aerospace, electrical, and most recently, biomedical engineering. This book aims to present the advanced development of RP technologies in various engineering areas as the solutions to the real world engineering problems. **UIST 2006**, 2006 *Proceedings of the ACM Symposium on User*
