Deep Learners and Deep Learner Descriptors for Medical Applications Loris Nanni, Sheryl Brahnham, Rick Brattin, Stefano Ghidoni, Lakhmi C. Jain, 2020-05-15 This book introduces readers to the current trends in using deep learners and deep learner descriptors for medical applications It reviews the recent literature and presents a variety of medical image and sound applications to illustrate the five major ways deep learners can be utilized 1 by training a deep learner from scratch chapters provide tips for handling imbalances and other problems with the medical data 2 by implementing transfer learning from a pre trained deep learner and extracting deep features for different CNN layers that can be fed into simpler classifiers such as the support vector machine 3 by fine tuning one or more pre trained deep learners on an unrelated dataset so that they are able to identify novel medical datasets 4 by fusing different deep learner architectures and 5 by combining the above methods to generate a variety of more elaborate ensembles This book is a value resource for anyone involved in engineering deep learners for medical applications as well as to those interested in learning more about the current techniques in this exciting field A number of chapters provide source code that can be used to investigate topics further or to kick start new projects *Solutions Manual for Signals and Systems* Michael D.
