Chen, 2015-03-24 This book investigates the intersection of terrorism, digital technologies and cyberspace. The evolving field of cyber terrorism research is dominated by single perspective, technological, political or sociological texts. In contrast, Terrorism Online uses a multi-disciplinary framework to provide a broader introduction to debates and developments that have largely been conducted in isolation. Drawing together key academics from a range of disciplinary fields including Computer Science, Engineering, Social Psychology, International Relations, Law and Politics, the volume focuses on three broad themes: 1. how and why do terrorists engage with the Internet, digital technologies and cyberspace? 2. what threat do these various activities pose and to whom? 3. how might these activities be prevented, deterred or addressed? Exploring these themes, the book engages with a range of contemporary case studies and different forms of terrorism, from lone actor terrorists and

protest activities associated with hacktivist groups to state based terrorism Through the book s engagement with questions of law politics technology and beyond the volume offers a holistic approach to cyberterrorism which provides a unique and invaluable contribution to this subject matter This book will be of great interest to students of cybersecurity security studies terrorism and International Relations

BOOK JACKET *On the Direct Detection of 229m Th* Lars Von der Wense, 2017-12-22 This thesis describes the first detection of a nuclear transition that had been sought for 40 years and marks the essential first step toward developing nuclear clocks Atomic clocks are currently the most reliable timekeepers Still they could potentially be outperformed by nuclear clocks based on a nuclear transition instead of the atomic transitions employed to date An elusive extraordinary state in thorium 229 seems to be the only nuclear transition suitable for this purpose and feasible using currently available technology Despite repeated efforts over the past 40 years until recently we had not yet successfully detected the decay of this elusive state Addressing this gap the thesis lays the foundation for the development of a new better frequency standard which will likely have numerous applications in satellite navigation and rapid data transfer Further it makes it possible to improve the constraints for time variations of fundamental constants and opens up the field of nuclear coherent control

Model Driven Engineering Languages and Systems Andy Schürr, Bran V. Selic, 2009-09-30 The pioneering organizers of the rst UML workshop in Mulhouse France in the summer of 1998 could hardly have anticipated that in little over a decade their initiative would blossom into today's highly successful MODELS conference series the premier annual gathering of researchers and practitioners focusing on a very important new technical discipline model based software and system engineering This expansion is of course a direct consequence of the growing significance and success of model based methods in practice The conferences have contributed greatly to the heightened interest in the field attracting much young talent and leading to the gradual emergence of its corresponding scientific and engineering foundations The proceedings from the MODELS conferences are one of the primary references for anyone interested in a more substantive study of the domain The 12th conference took place in Denver in the USA October 4-9 2009 along with numerous satellite workshops and tutorials as

well as several other related scientific gatherings The conference was exceptionally fortunate to have three eminent invited keynote speakers from industry Stephen Mellor Larry Constantine and Grady Booch
