Annual Report UMW Holdings Berhad,1994

The Modern Lean Enterprise Alexander Tsigkas,2022-01-20 The book addresses a modern reorientation of Lean abandoning the classical waste dogma that brings direct efficiency gains and substituting by a way to achieving indirect efficiency in a continuous and sustainable manner Waste is the output of a process that cannot be of further use while value is a matter of valuation a process whose output we conceive to be of further use Value and waste are not antithetical they are just not comparable issues We achieve added value to the modern Lean Enterprise through synergies that bring sustainable economic benefits to the company Such synergies use the complementarity theory developed by Milgrom and Roberts in 1990 on the principle that we can achieve maximal gains via the joint investment on complement activities and not investing Complementarity is not something specific to Lean Enterprises however Lean Enterprises can benefit the most from such a concept The reason is that Lean uses the principle of achieving more with less effort Less effort does not mean the use of fewer resources but the use of resources in a complementary way in order to achieve more rather than using them Complementarity is a feature by design Complementarity by design will help modern Lean companies have an easier transition in the digital era and the new world of Industry 4 0 In this second edition we have preserved the method of how to achieve Lean and have enhanced it to show how to move towards modern Lean within Industry 4 0 paradigm However if a company has not yet made the Lean step there is no need to make that step first before yielding the benefits Technology is the key Modern Lean Enterprise strengthens out of the old paradigm into the new one of Industry 4 0 Because of evolution such an enterprise achieves optimal technological complementarity necessary for synergies that sustain increasing profits

The Lean Innovation Cycle Michael Parent,2022-04-11 Currently businesses are forced to be more innovative than ever before Organizations must be sensitive to global trends such as digitization globalization and automation and at the same time build resilience and flexibility to combat unexpected changes in customer demand The coronavirus pandemic is just the most recent and pronounced example of this new normal business necessity Amidst the disruption many businesses are caught not knowing how to proceed How ought

one pursue or achieve innovation for the company Are there different innovation strategies Why might a business leader choose one over the other The Lean Innovation Cycle addresses these concerns by introducing a new multidisciplinary framework for both thinking about and pursuing innovation By taking key concepts from the quality management practices of Lean and Six Sigma the framework augments these tools and disciplines by incorporating other problem solving and design techniques including Human Centered Design The result is a view of innovation that many business leaders will find fits nicely into their existing paradigm of strategy and operational discipline After the introduction of the framework the book turns to understanding the differences advantages and tradeoffs in pursuing Lean Innovation in lieu of traditional technologically driven innovation approaches To this end the book considers issues of sustainability organizational strategy and competitive advantage The result is a thought provoking dialogue that informs the reader about the key considerations of how best to pursue innovation within their business and the business environment as well as the circumstances that might make one innovation strategy more congruent to an organization s culture goals and objectives than the other *Newsline* ,2006 *Computerworld* ,1993-09-13 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network

ERP and Supply Chain Management Christian Ndubisi Madu,Chu-hua Kuei,2005-06-10 Businesses today are faced with avalanche of information There is need to effectively manage information to serve customers better In today s highly competitive environment businesses need to be able to organize and coordinate their information so that a single view of information is maintained by all the service channels Information management can help to understand customers wants and needs and integrate such in product design It helps to manage inventory and reduces both cost and the cycle time to introduce new products to the marketplace Time to market is a critical issue in achieving competitiveness and without the availability of timely and accurate information it will not be possible to respond proactively to the changing market environment This book is about ERP and Supply Chain Management ERP is the short

form for Enterprise Resource Planning The aim of ERP is to integrate the functions of the different business units and departments such as finance operations accounting and human resources This integration is necessary to organize and coordinate information that may be scattered in different departments and making them available in an organized format to the different decision centers where they may be needed Through this integrative approach the different functional units of the business are able to share a common database exchange information and have consistent view of their operations This consistent view is also presented to the customer thus improving the quality of customer service With the integration of the information system the different functional departments work together to achieve common organizational goals and objectives Without such integration common customer services such as order processing would be difficult to track and inconsistent information may be relayed by the different departments to the customer Supply chain management is an integral aspect of ERP Businesses today focus on their core competence It is no longer technically and economically feasible to focus on all activities Rather certain activities may be shifted to partners or vendors that have core competence in such areas Mercedes Benz may find it better to subcontract its radios to Bose while focusing on its car designing Yet these two companies may need to share key information on customers wants and needs as well as information on product designs Integrating a supplier into the common database helps in providing quality products and services that will satisfy the needs of the customer Information technology plays a critical role in effective development of ERP system As many businesses develop online marketplace it becomes even more important to develop a single view of transactions to all value chain partners including customers manufacturer suppliers and other vendors This book therefore adopts a focus on ERP and Supply Chain Management to develop better plans to better serve the customer It adopts a management and a systemic perspective of these issues and does not deal with the software aspects of ERP The focus is on the fundamentals rather than on the advanced issues The book is intended to help managers executives and students to understand the basic concepts of ERP and Supply Chain Management
