Proceedings, RAWCON 98 IEEE Microwave Theory and Techniques Society, IEEE Pikes Peak Section, 1998 These papers from RAWCON 98 offer an interdisciplinary focus at the intersection between radio frequency and communications engineering Topics include broadband wireless systems concepts system architecture and networking and system modelling and measurement

Philips Telecommunication Review, 1994 *Broadband Access Networks* Leif Aarthun Ims, 2012-12-06 The access network is expected to be one of the major battlegrounds of telecommunications network operators since upgrades of the existing narrowband access network will be the critical factor in supplying multimedia broadband services in a competitive market The future broadband access network architecture needs to be flexible enough to efficiently support the provision of a full set of broadband and narrowband services with a wide range of capacity demands A wide range of broadband access technologies are available Furthermore the key issues in the upgrading of the very cost sensitive access network are financial as well as technological both for incumbent and new entrant operators Thus in order to identify minimum risk introductory strategies the economic viability of access network broadband upgrades needs to be carefully assessed However despite the definite need for techno economic evaluations very few books have been published in this field One of the reasons might be that broadband access network upgrading only very recently gained wide recognition as a key challenge for broadband delivery Secondly this kind of strategic work and these studies tend to be considered rather sensitive by operators and thus both results and methodologies are not usually readily

available Thirdly the work reported in this book in many respects was a major pioneering effort which quite ambitiously aimed at modelling the whole life cycle costs and revenue streams of access network upgrades as opposed to several other efforts which often are limited to pure investment cost comparisons

Radio Receivers for Systems of Fixed and Mobile Communications Vasiliy V. Logvinov, Sergey M. Smolskiy, 2022-05-13 The textbook acquaints the reader with the architecture of receivers of analog and digital radio systems helps to study the stages of designing a modern radio receiver and reveals the reasons and methods for its effective operation in networks for various purposes Particular attention is paid to the methods of generating and processing signals in the receivers of digital systems with multiple access which make it possible to provide data transfer rates close to the maximum possible according to Shannon As a textbook for students studying methods of optimal signal reception the book will also be useful to specialists in the field of telecommunications involved in the development of radio receivers The book shows how the development of theoretical circuitry and integrated technologies led to the active introduction of algorithmic methods for signal processing changed both the design of receivers and the methods of forming the information flow in free space MIMO beamforming The creation of a global 5G network based on heterogeneous networks puts forward new requirements for the architecture of receivers which are determined by the requirements to achieve high data rates low time delays or use in networks with coordinated multipoint transmission and reception CoMP To consolidate the knowledge gained the book includes a complete set of materials for online classes including questions and answers a guide to solving problems for each chapter and computer modeling units of receivers in the MicroCAP environment based on preliminary calculations
