

Vocabulary: Genetic Engineering

Vocabulary

- **Callus** – a growing mass of unorganized plant cells.
 - Plant calluses have the potential to develop into fully grown plants.
 - Calluses are used for gene insertion because clones can be made that all contain the same genetic material. When a new gene is inserted into a callus clone, the effect of that gene on the plant can be compared to other clones.
- **Exon** – a part of a gene that codes for a protein.
 - Within a gene, the coding parts of the gene (exons) are separated by noncoding parts, or *introns*.
 - The introns are removed from mRNA.
- **Genetic engineering** – the direct manipulation of an organism's genome using biotechnology.
- **Genetically modified organism (GMO)** – an organism whose genetic material has been altered using genetic engineering techniques.
 - Types of genetically modified crops include corn, soybeans, and cotton genetically modified to be resistant to insects and herbicide.
- **Genome** – the complete set of DNA in an organism, including all genes.
- **Green fluorescent protein (GFP)** – a protein, isolated from the jellyfish genome, that glows bright green when exposed to ultraviolet light.
 - In genetic engineering, the GFP gene can be attached to a promoter of interest to determine where in an organism that promoter is functional.
- **Herbicide** – a pesticide used to kill unwanted weeds.
 - Pesticides are substances that kill organisms that are harmful to crops.
- **Insecticide** – a pesticide used to kill unwanted insects.
- **Intron** – a part of a gene that does not code for a protein.
 - Introns are removed from mRNA during a process called RNA splicing.

Glossary of Biotechnology Terms, Fourth Edition Kimball Nill, 2005-11-16 Even if you studied biotechnology in school if you haven't stayed current it's not likely you'll be able to speak the same language as today's biotech scientists The same is even truer for nanotechnology where everything gets smaller and smaller except the terminology required to navigate it In the Glossary of Biotechnology and Nanobiotechnology Terms Fourth Edition Kimball Nill continues to improve upon the reference that for over a decade has helped thousands of professionals including scientists attorneys government workers lobbyists venture capitalists and university tech transfer staff to communicate successfully with those working on the cutting edge of modern science Now in its fourth edition Nill has taken the much appreciated step of adding nanotechnology to his glossary Just by casually perusing the Glossary of Biotechnology and Nanobiotechnology Terms Fourth Edition you will learn a number of enlightening facts Even those in related sciences will be surprised to discover what the language unveils The Glossary of Biotechnology and Nanobiotechnology Terms Fourth Edition is a handy reference designed

for people with little or no training in the biological and chemical sciences as well as scientists communicating from other disciplines Unlike other glossaries this one is both informative and completely accessible Instead of looking up one term to end up mired in equally difficult terminology this intelligently designed volume follows what the author refers to as a Reference Chain that steadily leads you to simpler more common terminology down to a level that anyone with a high school education will be able to understand The definitions are written utilizing words that enable you to conceptualize the idea embodied in the term with explanations based on analogy whenever possible Consider this example Suppose you just received a funding request a faculty memo or patent concern that refers to A DNA which happens to be the first definition in the Glossary A DNA A particular right handed helical form of DNA possessing 11 base pairs per turn which is the form that DNA molecules exist in when they are partially dehydrated A form DNA is found in fibers at 75% relative humidity and requires the presence of sodium potassium or cesium as the counterion Instead of lying flat the bases are tilted with respect to the helical axis and there are more base pairs per turn The A form is biologically interesting because it is probably very close to the conformation adopted by DNA RNA hybrids or by RNA RNA double stranded regions The reason is that the presence of the 2' hydroxyl group prevents RNA from lying in the B form See also B DNA DNA RNA HYBRID DEOXYRIBONUCLEIC ACID DNA BASE PAIR bp But then after looking at the above definition you wonder what exactly is a DNA RNA Hybrid DNA RNA Hybrid A double helix that consists of one chain of DNA hydrogen bonded to a chain of RNA by means of complementary base pairs See also HYBRIDIZATION MOLECULAR GENETICS HYBRIDIZATION PLANT GENETICS DOUBLE HELIX however while you've often heard mention of a double helix you were never quite sure what that meant Double Helix The natural coiled conformation of two complementary antiparallel DNA chains This structure was first put forward by Watson and Crick in 1953 See also DEOXYRIBONUCLEIC ACID DNA And that might bring you to ask Do you really actually know what DNA is Deoxyribonucleic Acid DNA Discovered by Frederick Miescher in 1869 it is the chemical basis for genes The chemical building blocks molecules of which genes i.e. paired nucleotide units that code for a protein to be produced by a cell's machinery such as its ribosomes are constructed Every inherited characteristic has its origin somewhere in the code of the organism's complement of DNA The code is made up of subunits called nucleic acids The sequence of the four nucleic acids is interpreted by certain molecular systems in order to produce the proteins required by an organism The structure of the DNA molecule was elucidated in 1953 The Glossary of Biotechnology and Nanobiotechnology Terms Fourth Edition is packed with over 400 pages of exceptionally well organized and cross referenced terminology making it an essential reference for anyone working directly or indirectly with those pioneering the frontiers of modern biology
