South Asia's Nuclear Security Bhumitra

Chakma, 2014-12-17 South Asia is often viewed as a potential nuclear flashpoint and a probable source of nuclear terrorism. But how valid are such perceptions? This book seeks to address this question and assesses the region's nuclear security from two principal standpoints. First, it evaluates the robustness of the Indo-Pakistani mutual deterrence by analysing the strength and weaknesses of the competing arguments regarding the issue. It also analyses the causes and consequences of nuclear arms race between India and Pakistan, the nature of deterrence structure in the region and the challenges of confidence building and arms control between the two countries in order to assess the robustness of South Asia's nuclear deterrence. Second, it assesses the safety and security of the nuclear assets and nuclear infrastructure of India and Pakistan. The author holds that the debate on South Asia's nuclear security is largely misplaced because the optimists tend to overemphasise the stabilising effects of nuclear weapons and the pessimists are too alarmists. It is argued that while the risks of nuclear weapons are significant, it is unlikely that India and Pakistan will give up their nuclear arsenals in the foreseeable future. Therefore, what needs to happen is that while nuclear elimination should be the long-term goal, in the interim years the two countries need to pursue minimum deterrence policies to reduce the likelihood of deterrence failure and the possibility of obtaining fissile materials by non-state actors.

A New Generation Material Graphene: Applications in Water

Technology Mu. Naushad, 2018-06-20 This book presents a unique collection of up-to-date applications of graphene for water science. Because water is an invaluable resource and the intelligent use and maintenance of water supplies is one of the most important and crucial challenges that stand before mankind, new technologies are constantly being sought to lower the cost and footprint of processes that make use of water resources as potable water as well as water for agriculture and industry which are always in desperate demand. Much research is focused on graphene for different water treatment uses. Graphene, whose discovery won the 2010 Nobel Prize in physics, has been a shining star in the material science in the past few years. Owing to its interesting electrical, optical, mechanical and chemical properties, graphene has found potential applications in a wide range of areas including water purification technology. A new type of graphene-based filter could be

the key to managing the global water crisis According to the World Economic Forum s Global Risks Report lack of access to safe clean water is the biggest risk to society over the coming decade Yet some of these risks could be mitigated by the development of this filter which is so strong and stable that it can be used for extended periods in the harshest corrosive environments and with less maintenance than other filters on the market The graphene based filter could be used to filter chemicals viruses or bacteria from a range of liquids It could be used to purify water dairy products or wine or in the production of pharmaceuticals This book provides practical information to all those who are involved in this field
