Intermediate Algebra with Early Functions and Graphing Margaret L. Lial, Charles David Miller, E. John Hornsby, Jr., 1995 **Precalculus Through Modeling and Visualization** Gary K. Rockswold, E. John Hornsby, Margaret L. Lial, 1999

This book intended for a graphing required college algebra and trigonometry or precalculus course offers an innovative approach by demonstrating the importance of mathematics to students and presenting the material in an accessible manner. The text consistently integrates mathematical concepts with real applications in order to enhance student intuition and understanding. Symbolic, algebraic, graphical, numerical, and verbal skills are continually reinforced throughout. When introducing mathematical ideas, the text moves from the concrete to the abstract rather than the reverse. It is the authors' philosophy that learning is increased when students can relate a concept to something in their lives. Hence, mathematical concepts are often introduced through applications that help make the mathematics real to students. Students see the importance of a topic from a practical and intuitive point of view, with models and applications playing a central part in the learning process.

New York Review of the Telegraph and Telephone and Electrical Journal, 1919 *Brief Calculus* Edmond C. Tomastik, 1996. This text embraces the reform being called for in calculus teaching and learning. All key concepts are presented following the Rule of Three from a graphical, numerical, and algebraic viewpoint, encouraging students to visualise, verbalise, and write.
