Focusing Telescopes in Nuclear Astrophysics Peter Ballmoos, 2007-11-25 HESS High Energy Stereoscopic System a ground based Cerenkov array telescopes has been operated since a few years and in 2004 has performed the first Galactic plane scan with a

sensitivity of a few percent of the Crab at energies above 100 GeV resulting in the discovery of eight sources most of which without any counterpart at different energies. Particular attention was devoted to HESS J1813-178 not identified with any known X gamma ray emitter and hypothesised to be a dark particle accelerator. Independently and at the same time INTEGRAL discovered a new soft gamma ray source namely IGR J18135-1751 identified as the counterpart of HESS J1813-178. This high energy emitter whose nature was still mysterious at the time of the discovery was then associated with the supernova remnant SNR G12.82+0.02. Even if a chance coincidence cannot be completely ruled out in view of the 2 arcmin INTEGRAL error box and the possible angular extension in the high energy, the overall characteristics of this star-forming region comprising SNR G12.82+0.02 are consistent with supernova plerion origin. More recently the MAGIC Major Atmospheric Gamma Imaging Cerenkov telescope collaboration has reported a positive observation of HESS J1813-178 resulting in a gamma ray flux consistent with the previous HESS detection and showing a hard power law with $\Gamma = 2.1$ in the range from 0.4 to 10 TeV.

Tenth Marcel Grossmann Meeting, The: On Recent Developments In Theoretical & Experimental General Relativity, Gravitation, & Relativistic Field Theories (In 3 Vols) - Procs Of The Mg10 Meeting Held At Brazilian Ctr For Res In Phys (Cbpf) Mario Novello, Santiago Perez Bergliaffa, Remo Ruffini, 2006-02-17. The Marcel Grossmann meetings were conceived to promote theoretical understanding in the fields of physics, mathematics, astronomy and astrophysics and to direct future technological, observational and experimental efforts. They review recent developments in gravitation and general relativity with major emphasis on mathematical foundations and physical predictions. Their main objective is to bring together scientists from diverse backgrounds and their range of topics is broad from more abstract classical theory and quantum gravity and strings to more concrete relativistic astrophysics observations and modeling. This Tenth Marcel Grossmann Meeting was organized by an international committee composed of D. Blair, Y. Choquet-Bruhat, D. Christodoulou, T. Damour, J. Ehlers, F. Everitt, Fang Li, Zhi S. Hawking, Y. Ne'eman, R. Ruffini (chair), H. Sato, R. Sunyaev and S. Weinberg and backed by an international coordinating committee of about 135 members from scientific institutions representing 54 countries. The scientific program included 29 morning plenary talks during 6 days and 57 parallel sessions over five afternoons during which roughly 500 papers were presented. These three volumes of the proceedings of MG10 give a broad view of all aspects of gravitation from mathematical issues to recent observations and experiments.

Linking Emotional Intelligence and Performance at Work Vanessa Urch Druskat, Gerald Mount, Fabio Sala, 2013-04-15. In this edited volume leading edge researchers discuss the link between Emotional Intelligence (EI) and workplace performance. Contributors from many areas such as social science management including organizational practitioners and psychologists have come together to develop a better understanding of how EI can influence work performance and whether research supports it.
