Marlow, 2012-12-02 Mathematical Foundations of Quantum Theory is a collection of papers presented at the 1977 conference on the Mathematical Foundations of Quantum Theory held in New Orleans. The contributors present their topics from a wide variety of backgrounds and specialization, but all shared a common interest in answering quantum issues. Organized into 20 chapters, this book's opening chapters establish a sound mathematical basis for quantum theory and a mode of observation in the double slit experiment. This book then describes the Lorentz particle system and other mathematical structures with which fundamental quantum theory must deal, and then some unsolved problems in the quantum logic approach to the foundations of quantum mechanics are considered. Considerable chapters cover topics on manuals and logics for quantum mechanics. This book also examines the problems in quantum logic and then presents examples of their interpretation and relevance to nonclassical logic and statistics. The accommodation of conventional Fermi, Dirac, and Bose-Einstein statistics in quantum mechanics or quantum field theory is illustrated. The final chapters of the book

present a system of axioms for nonrelativistic quantum mechanics with particular emphasis on the role of density operators as states Specific connections of this theory with other formulations of quantum theory are also considered These chapters also deal with the determination of the state of an elementary quantum mechanical system by the associated position and momentum distribution This book is of value to physicists mathematicians and researchers who are interested in quantum theory What's New in Nine Tamar E.
