Viles, 2016-10-10 The Anthropocene is a major new concept in the Earth sciences and this book examines the effects on geomorphology within this period. The book explores the ways in which future climate change due to anthropogenic causes may further magnify effects on geomorphology with respect to future hazards such as floods and landslides, the state of the cryosphere and sea level. The book concludes with a consideration of the ways in which landforms are now being managed and protected.
