Tourism and Hospitality for Sustainable Development Emmanuel Ndhlovu, Kaitano Dube, Catherine Muyama Kifworo, 2024-08-27 The tourism and hospitality industry is rapidly undergoing a disruptive transformation owing to advances in information and communications technology This book aims to highlight how the unfolding digital transformation trends help the industry attain sustainable development by taking full account of its current and future economic social and environmental impacts and addressing the needs of tourists the industry the environment and destinations With the advent of digital technologies following the Fourth Industrial Revolution

4IR there has been a rapid change in how customers and businesses interact regarding the timeliness and relevance of communication. Although the positive effects of digital transformation have received sustained scholarly interest, its adverse effects as well as how the digitisation of tourism operations can enable the achievement of sustainable development have attracted limited academic focus. The book comprises contributions that generate theoretical insights, empirical findings, and evidence-based recommendations by focusing on emerging and forecasted technologies used in the tourism and hospitality industry, such as blockchains, robots, Artificial Intelligence, Virtual Reality, big data, and analytics. The book could be helpful for future research to focus on the impact of different forms of digital technology by examining their sociocultural and environmental effects. Building on prior research, the chapters in this volume extrapolate current studies on digital development to provide more links to tourism and hospitality.

Microbial Biotechnology: Integrated Microbial Engineering for B3 – Bioenergy, Bioremediation, and Bioproducts Maulin P. Shah, Kiran Bala, 2025-05-15. This book highlights the latest advancements in microbial biotechnology and its crucial role in promoting sustainable development across three key areas: bioenergy, bioremediation, and bioproducts. It emphasizes the potential of microbes as renewable, sustainable resources capable of generating high-value products and acting as efficient alternatives to conventional methods. Key topics included: algal, bacterial, and fungal biotechnology focusing on producing biomass and valuable metabolites through CO₂ sequestration; concurrent bioremediation, resource recovery, and environmental sustainability. This book presents cutting-edge information on how integrated microbial engineering can valorize waste while sustainably generating essential resources. Additionally, it explores how microbes can help address critical challenges such as resource depletion and pollution management, offering solutions for a more sustainable future. Explores cutting-edge technologies in microbial biotechnology, including the production of high-value products using microbes such as bacteria, fungi, and algae. Elucidates strategies like mycoremediation, microbial degradation, and integrated CO₂ sequestration with bioremediation to address pressing environmental challenges. Understanding the potential of algae and purple bacteria in waste valorization and circular economy models, including biodiesel production and wastewater treatment. Provides comprehensive information on the emerging therapeutic possibilities of microbial systems and their role in disease control. Examines the role of microbes in enhancing plant growth as biofertilizers, contributing to sustainable agricultural practices and improved regional water quality through microbial bioremediation.
