Using XLIFF for translating Adobe® LiveCycle® Designer ES form designs

XLIFF (XML Localization Interchange File Format) is an XML-based format that stores extracted text and carries the data from one step to another in the translation process. For example, XLIFF can be used to exchange data between companies, such as a software publisher and a localization vendor, or between localization tools. The XLIFF specification can be found at: http://docs.oasis-open.org/xliff/xliff-core/xliff-core.html, and information about the Organization for the Advancement of Structured Information Standards (OASIS) can be found at: http://www.oasis-open.org/home/index.php.

You can use XLIFF for translating your form designs. You enable XLIFF IDs to be generated for the translatable text in your form designs using a registry setting. When the registry setting is enabled, Designer ES generates a unique XLIFF ID for each text string the first time you save the form design. Each subsequent time that you save the form design, Designer ES compares the XLIFF ID and string combinations to determine whether any changes were made since the last time the form design was saved. These changes include changed text, field deletion, or field insertion. If the text changed since the last save, Designer ES changes the text when you copy an object that already has an ID so that a duplicate ID is not created.

When you are ready to send the strings for translation, you extract the IDs and strings into the XLIFF format using a program or script. We provide the XDP2XLF.xslt style sheet as a sample.

After the text is translated, you can transform the translated text using a program or script. We provide the sample XLF2XDP.xslt style sheet, which creates a new version of the form design in the new language.

Note: The two XSLT style sheets are attached to this document. They are unsupported samples that you can modify as required.

Enabling XLIFF ID Generation

Enabling XLIFF ID generation increases the size of the form design because each translatable text element has a new xliff attribute with its assigned unique ID number (XLIID).
