

BALANCING SUPPLY & DEMAND

- Load shedding is likely to occur when demand exceeds supply.
- The power system has been operating at its limit in order to undertake as much maintenance as possible. Currently, many Base Load Stations must be taken out of service for essential maintenance. This lowers the available supply, thus increasing the likelihood of load shedding.

WINTER AND SUMMER ELECTRICITY PROFILE

The load profile for summer and winter is different. This means that the national power system will be particularly stressed during the evening peak between 5pm and 8pm in winter, and any time of the day in the summer months.
