Product Standards, Exports and Employment Rajat Acharyya, 2006-03-30 Through the process of globalization the trade dependence and interdependence of the developing countries have increased phenomenally than ever before. The characteristic of this late twentieth century globalization process has been the new technological revolution that has led to a high rate of world exports of electronics and other high technology products. This has marginalized most of the developing countries exporting largely the low quality and low value addition manufacturing and primary products, barring a few exceptions like China, India, and Mexico. The fruits of globalization have therefore been unevenly distributed so far across the developed and the developing countries. Moreover, whatever little growth in exports of medium technology products has been achieved by a few of them is largely driven by outsourcing of low value addition and low stage of activities by the foreign multinationals. Outsourcing of software services rather than development of software packages in India and assembly line for automobiles in Mexico are the two glaring examples. These activities may have boosted the total exports of these countries but they have failed to generate any feedback effect on the rest of the economy in terms of skill formation, increase in overall productivity level, and product diversification.

**Protocols and Architectures for Wireless Sensor Networks** Holger Karl, Andreas Willig, 2007-10-08 Learn all you need to know about wireless sensor networks. *Protocols and Architectures for Wireless Sensor Networks* provides a thorough description of the nuts and bolts of wireless sensor networks. The authors give an overview of the state of the art, putting all the individual solutions into perspective with one and other. Numerous practical examples, case studies, and illustrations demonstrate the theory, techniques, and results presented. The clear chapter structure, listing learning objectives, outline, and summarizing key points, help guide the reader expertly through the material. *Protocols and Architectures for Wireless Sensor Networks* covers architecture and communications protocols in detail, with practical implementation examples and case studies. Provides an understanding of mutual relationships and dependencies between different protocols and architectural decisions. Offers an in-depth investigation of relevant protocol mechanisms. Shows which protocols are suitable for which tasks within a wireless sensor network and in which circumstances they perform efficiently. Features an extensive website with the bibliography, PowerPoint slides, additional exercises, and worked solutions. This text provides academic researchers, graduate students in computer science, computer engineering, and electrical engineering, as well as practitioners in industry and research engineers, with an understanding of the specific design challenges and solutions for wireless sensor networks. Check out [www.wiley.com/go/wsn](http://www.wiley.com/go/wsn) for accompanying course material. I am deeply impressed by the book of Karl Willig. It is by far the most complete source for wireless sensor networks. The book covers almost all topics related to sensor networks, gives an amazing number of references, and thus is the perfect source for students, teachers, and researchers. Throughout the book, the reader will find high quality text, figures, formulas, comparisons, etc. all you need for a sound basis to start sensor network research.
