Valuation In Life Sciences A Practical Guide:

Valuation in Life Sciences Boris Bogdan, Ralph Villiger, 2010-04-19 Valuation is a hot topic among life sciences professionals. There is no clear understanding on how to use the different valuation approaches and how to determine input parameters. Some do not value at all, arguing that it is not possible to get realistic and objective numbers out of it. Some claim it to be an art. In the following chapters we will provide the user with a concise valuation manual providing transparency and practical insight for all dealing with valuation in life sciences: project and portfolio managers, licensing executives, business developers, technology transfer managers, entrepreneurs, investors, and analysts. The purpose of the book is to explain how to apply discounted cash flow and real options valuation to life sciences projects, i.e. to license contracts, patents, and firms. We explain the fundamentals and the pitfalls with case studies so that the reader is capable of performing the valuations on his own and repeat the theory in the exercises and case studies. The book is structured in five parts. In the first part, the introduction, we discuss the role of the players in the life sciences industry and their particular interests. We describe why valuation is important to them, where they need it, and the current problems to it. The second part deals with the input parameters required for valuation in life sciences, i.e. success rates, costs, peak sales, and timelines.

Valuation in Life Sciences Boris Bogdan, Ralph Villiger, 2008-03-29 This is the first complete guide to valuation in life sciences for industry professionals, investors, and academics. Boris Bogdan and Ralph Villiger introduce the characteristics of drug and medical device development, explain how to translate these into the valuation, and provide valuable industry data. Special emphasis is put on the practicability of the proposed methods by including many hands-on examples without compromising on realistic results.

Discounting the Future Liliana Doganova, 2024-02-13 A pioneering exploration of the defining traits and contradictions of our relationship to the future through the lens of discounting. Forest fires, droughts, and rising sea levels beg a nagging question: have we lost our capacity to act on the future? Liliana Doganova's book sheds new light on this anxious query. It argues that our relationship to the future has been trapped in the gears of a device called discounting. While its incidence remains little known, discounting has long been entrenched in market and policy practices, shaping the ways firms and governments look to the future and make decisions accordingly. Thus, a sociological account of discounting formulas has become urgent. Discounting means valuing things through the flows of costs and benefits that they are likely to generate in the future, with these future flows being literally discounted as they are translated in the present. How have we come to think of the future and of valuation in such terms? Building on original empirical research in the historical sociology of discounting, Doganova takes us to some of the sites and moments in which discounting took shape and gained momentum: valuation of European forests in the eighteenth and nineteenth centuries, economic theories devised in the early 1900s, debates over business strategies in the postwar era, investor-state disputes over the nationalization of natural resources, and drug development in the biopharmaceutical industry today. Weaving these threads together, the book pleads for an understanding
